The Challenge of CMC Regulatory

Compliance for Biopharmaceuticals John Geigert,2012-12-06 The greater our knowledge increases the more our ignorance unfolds U S President John F Kennedy speech Rice University September 12 1962 My primary purpose for writing this book was much more than to provide another information source on Chemistry Manufacturing Controls CMC that would rapidly become out of date My primary purpose was to provide insight and practical suggestions into a common sense business approach to manage the CMC regulatory compliance requirements for biopharmaceuticals Such a common sense business approach would need 1 to be applicable for all types of biopharmaceutical products both present and future 2 to address the needs of a biopharmaceutical manufacturer from the beginning to the end of the clinical development stages and including post market approval and 3 to be adaptable to the constantly changing CMC regulatory compliance requirements and guidance Trying to accomplish this task was a humbling experience for this author In Chapter 1 the CMC regulatory process is explained the breadth of products included under the umbrella of biopharmaceuticals are identified and the track record for the pharmaceutical and biopharmaceutical industry in meeting CMC regulatory compliance is discussed In Chapter 2 while there are many CMC commonalities between biopharmaceuticals and chemically synthesized pharmaceuticals the significant differences in the way the regulatory agencies handle them are examined and the reasons for why such differences are necessary is discussed Also the importance of CMC FDA is stressed

Regulatory Intelligence as the Basis for Regulatory

Strategy and Global Drug Development Petra Heyen, 2005-04-28 Master's Thesis from the year 2004 in the subject Health Miscellaneous grade sehr gut University of Bonn Mathematisch Naturwissenschaftliche Fakultät language English abstract

The Regulatory Affairs RA department is a key discipline in the global network of drug development. During drug development, regulatory strategy is one crucial success factor for the approval of the development candidate. Also, regulatory strategy can optimise labelling in the key countries in order to maximise the market success. No submission and approval would be possible without the appropriate dossier composition and compilation. Without adherence to the respective guidance documents and scientific advice from Health Authorities to design the optimal clinical development plan, optimal labelling would not be feasible. These two examples show some characteristics of the regulatory strategy: it is highly interactive with other disciplines and it is heavily based on a thorough intelligence work which enables the RA Manager to know the rules of the game and to develop the optimal regulatory strategy for the current development candidate. The major cornerstone for developing a regulatory strategy is regulatory intelligence. This document focuses on regulatory intelligence. The regulatory contributions to the global drug development from early research to submission are described. Strategies for generic drugs as well as detailed strategies for life cycle management are excluded. Major components of regulatory intelligence are Competitor Information, Information on Regulatory Environment, Information on Legal Requirements. Competitor analysis is an essential aspect of the intelligence work. Sources of competitive information as well as relevant items of competitive information are described. Sources of information about the regulatory environment and sources of information about the legal regulatory environment are described and their tremendous impact on setting up and modifying the regulatory strategy evaluated. Special attention is paid to the components and sources of regulatory intelligence information, e.g. Internet links and documents related to intelligence information. Some examples show how regulatory intelligence information supports the regulatory strategic considerations. The last section describes the regulatory strategy itself and examples of how regulatory intelligence acts as the basis for setting up the regulatory strategy. What is the basis of strategic considerations? What are the considerations? What are the major components of a regulatory strategy? How do the different disciplines involved in drug development work together?

The Challenge of CMC Regulatory Compliance for Biopharmaceuticals John Geigert, 2014-07-08 This book highlights the challenges facing quality assurance, quality control (QA/QC) in today's biopharmaceutical environment and presents the strategic importance and value generated by QA/QC for their involvement in control of manufacturing. It will put into perspective the need for a graded approach to QA/QC from early clinical trials through market approval. Since the first edition published in 2004, there have been more than 50 new regulatory guidances released by the Food and Drug Administration (FDA), European Medicines Agency (EMA) and ICH that affect the CMC regulatory compliance of biopharmaceuticals. Also, the application of biosimilars has been developed in Europe and is under development in the USA. The revised update will be broadened to include not only biopharmaceuticals, biotech drugs but also

other biologics vaccines cell therapy plasma derived proteins etc Choosing the Right Regulatory Career Peggy Berry, 2010-11-10 Examines the wide range of opportunities available to those interested in the regulatory profession
