CMOS/CCD Sensors and Camera Systems Gerald C. Holst, Terrence S. Lomheim, 2007 Hyperspectral Satellites and System Design Shen-En Qian, 2020-04-02 Hyperspectral Satellites and System Design is the first book on this subject. It provides a systematic analysis and detailed design of the entire development process of hyperspectral satellites. Derived from the author's 25 year firsthand experience as a technical lead of space missions at the Canadian Space Agency, the book offers engineers, scientists, and decision makers detailed knowledge and guidelines on hyperspectral satellite system design, trade-offs, performance modeling, and simulation optimization from component to system level, subsystem design, and implementation strategies. This information will help reduce the risk, shorten the development period, and lower the cost of hyperspectral satellite missions. This book is a must-have reference for professionals in developing hyperspectral satellites and data applications. It is also an excellent introductory book for early practitioners and students who want to learn more about hyperspectral satellites and their applications.

Intelligent Network Video Fredrik Nilsson, Communications Axis, 2016-12-01 Continuing in the tradition of the bestselling first edition, this book examines networked surveillance video solutions. It provides the latest details on industry hardware, software, and networking capabilities of the latest cameras and DVRs. It addresses in full detail updated specifications on MPEG 4 and other digital video formats, resolution advantages of analog v digital, intelligent video capabilities, frame rate control, and indoor/outdoor installations factors. New chapters include cloud computing standards and thermal cameras.

Optical Payloads for Space Missions Shen-En Qian, 2016-01-26 Optical Payloads for Space Missions is a comprehensive collection of optical spacecraft payloads with contributions by leading international rocket scientists and instrument builders. Covers various applications including earth observation, communications, navigation, weather, and science satellites and deep space exploration. Each chapter covers one or more specific optical payload. Contains a review chapter which provides readers with an overview on the background, current status, trends, and future prospects of the optical payloads. Provides information on the principles of the optical spacecraft payloads, missions, background, motivation, and challenges, as well as the scientific returns, benefits, and applications.

Infrared and Terahertz Detectors, Third Edition Antoni Rogalski, 2019-01-10 This new edition of Infrared and Terahertz Detectors provides a comprehensive overview of infrared and terahertz detector technology from fundamental science to materials and fabrication techniques. It contains a complete overhaul of the contents, including several new chapters and a new section on terahertz detectors and systems. It includes a new tutorial introduction to technical aspects that are fundamental for basic understanding. The other dedicated sections focus on thermal detectors, photon detectors, and focal plane arrays.

2D Materials for Infrared and Terahertz Detectors Antoni Rogalski, 2020-10-25 2D Materials for Infrared and Terahertz Detectors provides an overview of the performance of emerging detector materials while also offering for the first time a comparison with traditional materials used in the fabrication of infrared and terahertz detectors. Since the

discovery of graphene its applications to electronic and optoelectronic devices have been intensively researched The extraordinary electronic and optical properties allow graphene and other 2D materials to be promising candidates for infrared IR and terahertz THz photodetectors and yet it appears that the development of new detectors using these materials is still secondary to those using traditional materials This book explores this phenomenon as well as the advantages and disadvantages of using 2D materials Special attention is directed toward the identification of the most effective hybrid 2D materials in infrared and terahertz detectors as well as future trends Written by one of the world s leading researchers in the field of IR optoelectronics this book will be a must read for researchers and graduate students in photodetectors and related fields Features Offers a comprehensive overview of the different types of 2D materials used in fabrication of IR and THz detectors and includes their advantages disadvantages The first book to compare new detectors to a wide family of common commercially available detectors that use traditional materials

Machine Vision Jürgen Beyerer, Fernando Puente León, Christian Frese, 2015-10-01 The book offers a thorough introduction to machine vision It is organized in two parts The first part covers the image acquisition which is the crucial component of most automated visual inspection systems All important methods are described in great detail and are presented with a reasoned structure The second part deals with the modeling and processing of image signals and pays particular regard to methods which are relevant for automated visual inspection
