Technology and Science for the Ships of the Future Alberto Marinò, 2018-06-15 In 1974 a scientific conference covering marine automation group and large vessels issues was organized under the patronage of the Technical Naval Studies Centre CETENA and the Italian National Research Council CNR A later collaboration with the Marine Technical Association ATENA led to the renaming of the conference as NAV extending the topics covered to the technical field previously covered by ATENA national conferences The NAV conference is now held every 3 years and attracts specialists from all over the world This book presents the proceedings of NAV 2018 held in Trieste Italy in June 2018 The book contains 70 scientific papers 35 technical papers and 16 reviews and subjects covered include comfort on board conceptual and practical ship design deep sea mining and marine robotics protection of the environment renewable marine energy design and engineering of offshore vessels digitalization unmanned vehicles and cyber security yacht and pleasure craft design and inland waterway vessels With its comprehensive coverage of scientific and technical maritime issues the book will be of interest to all those involved in this important industry

The Oil & Gas Year Brazil 2019 The Energy Year, 2019-09-09 Oil and gas production is expected to increase over the coming decade with the ANP projecting an output of 5.5 million bopd by 2027-2028 Furthermore 44 offshore production systems are expected to come on line by 2030 Brazil has started to attract the attention of oil majors across the globe and will continue to be a regional investment hub for years to come As such the report covers the laws and regulations of the new administration that will shape the local investment environment This third edition also delves into other attractive business opportunities in Brazil's conventional offshore and onshore basins Less than 30,000 wells have been drilled in the country's oil and gas history compared to almost double that in Argentina and more than 100 times that in the USA The ANP recognises the need to incentivise E P in areas the prolific Pre Salt Polygon Despite the progress being made in the development of Brazil's oil and gas industry challenges loom overhead Environmental issues will come to the fore as some segments of society contest the new administration's move to a more laissez faire market approach particularly in areas near the Amazon rainforest The government is under pressure to tackle these issues and push forward the industry's development Extensive in depth analysis is supported by comprehensive maps illustrations and graphs to create a market guide essential for players seeking to either expand their operations or enter the Brazilian oil and gas market

Modular Systems for Energy Usage Management Yatish T. Shah, 2020-01-22 a very unique book that integrates benefits of modular systems for enhanced sustainability to meet the global challenges of rapid and sometimes uncontrolled industrialization in the 21st century Pinakin Patel T2M Global This book examines the role of the modular approach for the back end of the energy industry energy usage management It outlines the use of modular approaches for the processes used to improve energy conservation and efficiency which are preludes to the prudent use of energy Since energy consumption is conventionally broken down into four sectors residential transportation industrial and commercial the

discussions on energy usage management are also broken down into these four sectors in the book The book examines the use of modular systems for five application areas that cover the sectors described above buildings vehicles computers and electrical electronic products district heating and wastewater treatment and desalination This book also discusses the use of a modular approach for energy storage and transportation Finally it describes how the modular approach facilitates bottom up top down and hybrid simulation and modeling of the energy systems from various scientific and socioeconomic perspectives Aimed at industry professionals and researchers involved in the energy industry this book illustrates in detail with the help of concrete industrial examples how a modular approach can facilitate management of energy usage

Maritime Technology and Engineering 5 Volume 2 Carlos Guedes Soares,2021-07-08 This set of two volumes comprises the collection of the papers presented at the 5th International Conference on Maritime Technology and Engineering MARTECH 2020 that was held in Lisbon Portugal from 16 to 19 November 2020 The Conference has evolved from the series of biennial national conferences in Portugal which have become an international event and which reflect the internationalization of the maritime sector and its activities MARTECH 2020 is the fifth of this new series of biennial conferences The set comprises 180 contributions that were reviewed by an International Scientific Committee Volume 2 is dedicated to ship performance and hydrodynamics including CFD maneuvering seakeeping moorings and resistance In addition it includes sections on ship machinery renewable energy fishing and aquaculture coastal structures and waves and currents

Sustainable Development and Innovations in Marine Technologies Petar Georgiev,Carlos Guedes Soares,2019-08-22 Sustainable Development and Innovations in Marine Technologies includes the papers presented at the 18th International Congress of the Maritime Association of the Mediterranean IMAM 2019 Varna Bulgaria 9 11 September 2019 Sustainable Development and Innovations in Marine Technologies includes a wide range of topics Aquaculture Construction Defence Design Dynamic response of structures Degradation Defects in structures Electrical equipment of ships Human factors Hydrodynamics Legal Social aspects Logistics Machinery Marine environmental protection Materials Navigation Noise Non linear motions manoeuvrability Off shore and coastal development Off shore renewable energy Port operations Prime movers Propulsion Safety at sea Safety of Marine Systems Sea waves Seakeeping Shaft Ship resistance Shipyards Small Stability Static response of structures Structures and Wind loads The IMAM series of Conferences started in 1978 when the first Congress was organised in Istanbul Turkey IMAM 2019 is the eighteenth edition and in its nearly forty years of history this biannual event has been organised throughout Europe Sustainable Development and Innovations in Marine Technologies is essential reading for academics engineers and all professionals involved in the area of sustainable and innovative marine technologies

Methanol Biofuel in Combustion Engines Yacine Rezgui,2025-08-01 Biofuel Perspectives Methanol and Ethanol in Combustion Engines from Production to Practical Application provides a detailed and in depth review of the combustion characteristics of methanol and ethanol as biofuels with a focus on their chemical

reactions and kinetic models as well as on their combustion experiments in laboratory devices and usage in real engines The book also covers methanol and ethanol production technologies and their physico chemical properties Users will find a complete and consolidated resource on methanol and ethanol biofuels that will be a valuable resource for biofuel researchers and scientists automotive engineers technologists policymakers environmentalists and students Provides comprehensive information on the production toxicology and uses of methanol and ethanol Covers experimental combustion of methanol and ethanol in laboratory devices and real engines Delves into the unimolecular decomposition and H abstraction reactions of methanol and ethanol as well as detailed comprehensive and reduced kinetic models in shock tubes reactors and flames Explores the production and utilization of green methanol emphasizing its eco friendly aspects Contains practical applications making the content relevant to a wide range of industries

Encyclopedia of Ocean Engineering Weicheng Cui, Shixiao Fu, Zhiqiang Hu, 2022-06-29 This encyclopedia adopts a wider definition for the concept of ocean engineering Specifically it includes 1 offshore engineering fixed and floating offshore oil and gas platforms pipelines and risers cables and moorings buoy technology foundation engineering ocean mining marine and offshore renewable energy aquaculture engineering and subsea engineering 2 naval architecture ship and special marine vehicle design intact and damaged stability technology for energy efficiency and green shipping ship production technology decommissioning and recycling 3 polar and Arctic Engineering ice mechanics ice structure interaction polar operations polar design environmental protection 4 underwater technologies AUV ROV design AUV ROV hydrodynamics maneuvering and control and underwater specific communicating and sensing systems for AUV ROVs It summarizes the A Z of the background and application knowledge of ocean engineering for use by ocean scientists and ocean engineers as well as nonspecialists such as engineers and scientists from all disciplines economists students and politicians Ocean engineering theories ocean devices and equipment ocean design and operation technologies are described by international experts many from industry and each entry offers an introduction and references for further study making current technology and operating practices available for future generations to learn from The book also furthers our understanding of the current state of the art leading to new and more efficient technologies with breakthroughs from new theory and materials As the land resources approach the exploitation limit ocean resources are becoming the next choice for the sustainable development As such ocean engineering is vital in the 21st century

problems Economic analysis Mathematical models methods and algorithms Fishery Legal aspects Aviation Optimum Choice of Energy System Configuration and Storages for a Proper Match between Energy Conversion and Demands Andrea Lazzaretto,Andrea Toffolo,2020-01-31 This Special Issue addresses the general problem of a proper match between the demands of energy users and the units for energy conversion and storage by means of proper design and operation of the overall energy system configuration The focus is either on systems including single plants or groups of plants connected or not to one or more energy distribution networks In both cases the optimum design and operation involve decisions about thermodynamic processes about the type number design parameters of components plants and storage capacities and about mutual interconnections and the interconnections with the distribution grids The problem is absolutely general encompassing design and operation of energy systems for single houses groups of houses industries industrial districts municipal areas regions and countries The presented papers show that similar approaches can be used in different applications although a general standard has not been achieved yet **Energy Transport Infrastructure for a Decarbonized Economy** Klaus Brun,Tim Allison,Rainer Kurz,Karl Wygant,2024-08-22 Energy Transport Infrastructure for a Decarbonized Economy evaluates the transportation of fluids required in the decarbonized energy economy The book will help researchers design manufacturers and those within government and academia to understand challenges and guide the design and development of systems machinery and infrastructure needed for a decarbonized energy economy The book provides comprehensive insights on the implications of the energy transition for a critical aspect of commerce the infrastructure central to energy transportation and the economy This practical book highlights the unique systems central to the efficient transport of various forms of energy After outlining the need for transporting energy types of fluids used to transport energy and various means of transportation the book covers the importance of understanding the energy marketplace global perspectives and then moves into the transport of natural gas hydrogen and carbon dioxide The work concludes with coverage of technology gaps research and development future trends and solutions Led by professionals with decades of experience and collecting insights from expert contributors this book begins with the essentials of energy transport provides detailed coverage of modes of transport considers critical questions of energy supply and economics and looks at long term environmentally sensitive sustainable options for the transport thereof A powerful tool for the energy transition Energy Transport Infrastructure for a Decarbonized Economy offers expert analysis on sustainable energy transport and its impact on our future Focuses on the energy transport required for a decarbonized energy economy Addresses challenges of pipeline transport of hydrogen and carbon dioxide as well as new infrastructure needs Provides details on the layout specifications and technical requirements of systems required for the transportation of hydrogen natural gas and carbon dioxide *Powerfuels* Nils Bullerdiek,Ulf Neuling,Martin Kaltschmitt,2024-12-05 Powerfuels are the subject of intense and often contentious current discussions within industry research politics as well as the overall society These

discussions primarily revolve around the practical and technical feasibility of power to X processes and applications their economic viability the respective environmental benefits the contribution to climate protection as well as the social acceptability Thus the primary aim of this book is to provide a comprehensive overview of various aspects diverse considerations and different perspectives regarding the future role and utilization of power to X pathways on a global scale This encompasses the challenge of sourcing necessary educts feedstock options their conversion into different products and product groups exploring the possibilities of using these electricity based fuels hydrocarbons in various markets and establishing suitable framework conditions for viable and sustainable markets in the years to come These objectives are achieved through a collection of papers contributed by experts actively engaged in various fields related to power to X

Marine Engines Performance and Emissions María Isabel Lamas Galdo, 2021-09-02 This book contains a collection of peer review scientific papers about marine engines performance and emissions These papers were carefully selected for the Marine Engines Performance and Emissions Special Issue of the Journal of Marine Science and Engineering Recent advancements in engine technology have allowed designers to reduce emissions and improve performance Nevertheless further efforts are needed to comply with the ever increased emission legislations This book was conceived for people interested in marine engines This information concerning recent developments may be helpful to academics researchers and professionals engaged in the field of marine engineering
