### **Magic Quadrant For Transportation Management Systems:**

*Transportation Management with SAP TM 9* Jayant Daithankar, Tejkumar Pandit, 2014-08-07 The implementation of a TMS solution is a highly complex and mission critical project. If executed correctly, a good TMS can deliver a number of benefits to the organization in terms of optimization, greater efficiency, reduced errors, and improved revenue through accurate invoicing. However, a number of projects fail to realize these benefits for a host of reasons such as an incorrect product selection, over customization of the system, and lack of detailed processes. The evaluation and selection of the right transportation management system is a very critical step in the successful implementation of a TMS product as well as ensuring that the organization is able to realize the benefits expected from the system. *Transportation Management with SAP TM 9* is a guide for CIOs and CXOs evaluating options for various transportation management solutions available in the market and helps in appropriate decision making before committing investment. A proven evaluation framework and guidance provided in the book can help decision makers with product selection and help to create a business case for management approval and design a future roadmap for the organization. The book provides a comprehensive understanding of what SAP transportation management is and is useful for teams involved in TM implementation and roll outs to ensure preparedness. The book explains end-to-end freight life cycle processes, functional system landscape, implementation challenges, and post-go-live precautions required to optimize investments in SAP TM. *Transportation Management with SAP TM 9* also acts as a step-by-step implementation guide with details of configuration required to set up a TM9 system. This book also covers the upgrade of SAP TM8 to SAP TM9, which will be useful for existing clients who are on TM 8. Nonavailability of SAP TM skilled resources is a major challenge faced by organizations, and the book provides a detailed competency building plan along with skill set requirements to create a competent and trained workforce to manage transformation. The current book available in the market on SAP TM is based on Version 6 release, which does not cover air freight processes. Our book covers end-to-end air freight configuration scenarios for logistic companies.

**Operative Transportation Planning** Thorben Seiler, 2012-01-05 Transportation management in today's consumer goods industry can be characterized by a high proportion of outsourced transportation services. Due to rising freight costs, consumer goods manufacturers are seeking opportunities to increase the efficiency of their transportation network. This book presents an operational transportation planning problem typical of the consumer goods industry, focusing on a network of suppliers, production facilities, and warehouses. With respect to the large share of outsourcing in these networks, a detailed analysis of freight costs based on contractual agreements is provided. From this analysis, a number of opportunities for efficiency gains are identified and consolidated in an operative transportation planning problem that is numerically investigated. Furthermore, an overview of processes and organizational requirements in transportation management is given, with special focus on the integration of existing commercial Transportation Management Systems (TMS).

**Artificial Intelligence and Machine Learning for Smart Community** T V Ramana, G S Ghantasala, R Sathiyaraj, Mudassir Khan, 2024-01-26 Intelligent systems are technologically advanced machines that perceive and respond to the world around them. *Artificial Intelligence and Machine Learning for Smart Community: Concepts and Applications* presents the evolution, challenges, and limitations of the application of machine learning and artificial intelligence to intelligent systems and smart communities. It covers the core and fundamental aspects of artificial intelligence, machine learning, and computational algorithms in smart intelligent systems. It discusses the integration of artificial intelligence with machine learning using mathematical modeling. It elaborates on concepts like supervised and unsupervised learning and machine learning algorithms such as linear regression, logistic regression, random forest, and performance evaluation matrices. It introduces modern algorithms such as convolutional neural networks and support vector machines. It presents case studies on smart healthcare, smart traffic management, smart buildings, autonomous vehicles, smart education, modern community, and smart machines. *Artificial Intelligence and Machine Learning for Smart Community: Concepts and Applications* is primarily written for graduate students and academic researchers working in the fields of computer science and engineering, electrical engineering, and information technology.
