This is supported by consideration of the effects upon the maintenance and support decision by the presence of No Fault Found error signals within system data. Further to this, the role of diagnostics and prognostics is also discussed. In addition, this text presents the fundamental information required to deliver an effective TES solution strategy and identification of core technologies. The book contains reference and discussion relative to automotive, rail and several other industrial case studies to highlight the potential of TES to redefine the product creation and development process. Additionally, the role of warranty and service data in the product creation and delivery system is also introduced. This book offers a valuable reference resource for academics, practitioners and students of TES and the associated supporting technologies and business models that underpin whole life product creation and delivery systems through the harvesting and application of condition and use based data.
