Hochstedler, 2016 Rich data sets exist in Major League Baseball MLB and the National Football League NFL that track players and equipment i.e. the ball in space and time Using machine learning and other analytical techniques this research explores the various data sets in each sport providing advanced insights for team decision makers Additionally a framework will be presented on how the results can impact organizational decision making Qualitative research methods e.g. interviews with front office personnel are used to provide the analysis with both context and breadth whereas various quantitative analyses supply depth to the research For example the reader will be exposed to mathematical computer science terms such as Kohonen Networks and Voronoi Tessellations However they are presented with great care to simplify the concepts allowing an understanding for most readers As this research is jointly supported by the engineering and management schools certain topics are kept at a higher level for readability For any questions contact the author for further discussion Part I will address the distinction between performance and production followed briefly by a decomposition of a typical MLB organizational structure and finally display how the results of this analyses can directly impact areas such as player evaluation, advance scouting and in game strategy Part II will similarly present how machine learning analyses can impact opponent scouting and personnel evaluation in the NFL

When Big Data Was Small Richard D. Cramer, 2019-05-01 Richard D Cramer has been doing baseball analytics for just about as long as anyone alive even before the term sabermetrics existed He started analyzing baseball statistics as a hobby in the mid 1960s not long after graduating from Harvard and MIT He was a research scientist for SmithKline and in his spare time used his work computer to test his theories about baseball statistics One of his earliest discoveries was that clutch hitting then one of the most sacred pieces of received wisdom in the game didn't really exist In *When Big Data Was Small* Cramer recounts his life and remarkable contributions to baseball knowledge In 1971 Cramer learned about the Society for American Baseball Research SABR and began working with Pete Palmer whose statistical work is credited with providing the foundation on which SABR is built Cramer cofounded STATS Inc and began working with the Houston Astros Oakland A's Yankees and White Sox with the help of his new Apple II computer Yet for Cramer baseball was always a side interest even if a very intense one for most of the last forty years His main occupation which involved other big data activities was that of a chemist who pioneered the use of specialized analytics often known as computer aided drug discovery to help guide the development of pharmaceutical drugs After a decade long hiatus Cramer returned to baseball analytics in 2004 and has done important work with Retrosheet since then *When Big Data Was Small* is the story of the earliest days of baseball analytics and computer aided drug discovery

Frontiers in Major League Baseball John Ruggiero, 2010-11-03 This book focuses on the application of Data Envelopment Analysis DEA to Major League Baseball MLB DEA is a nonparametric linear programming model that is used across academic disciplines In sports economics authors have applied the technique primarily to assess team and or managerial efficiency The basis for performance analysis is economic production theory where it is assumed that baseball can be viewed as a production process whereby inputs player quality measures are transformed into outputs wins attendance The primary advantage that DEA has over more traditional regression based approaches is the ability to handle multiple inputs and multiple outputs Further the approach is nonparametric and hence does not require a priori specification of the production function The book develops the theory of DEA in the context of a production environment A focal point is the assessment of technical and cost efficiency of MLB teams It is shown that previous frontier applications that measure efficiency provide biased results given that the outcome of a game is zero sum If a team loses a game due to inefficiency another team wins a lost game A corrected frontier is presented to overcome this problem Free agent salary arbitration is analyzed using a dual DEA model Each free agent's contract zone is identified The upper and lower bounds representing the player's and team's perspective of value respectively are estimated Player performance is estimated using a modified DEA model to rank order players based on multiple attributes This model will be used to evaluate current Hall of Fame players We provide arguments for other players who are deserving of

membership We also use our measure of performance and evaluate age performance profilers for many ball players Regression analysis is used to identify the age of peak performance The method is used to evaluate some of the all time greats We also use the method to analyze admitted and implicated steroid users The results clearly show that performance was enhanced This book will provide appropriate theoretical models with methodological considerations and interesting empirical analyses and is intended to serve academics and practitioners interested in applying DEA to baseball as well as other sports or production processes
