Overview of the Malware Analysis Process

1. Use automated analysis sandbox tools for an initial assessment of the suspicious file.
2. Set up a controlled, isolated laboratory in which to examine the malware specimen.
3. Examine static properties and meta-data of the specimen for triage and early theories.
4. Perform behavioral analysis to examine the specimen's interactions with its environment.
5. Perform static code analysis to further understand the specimen's inner-workings.
6. Perform dynamic code analysis to understand the more difficult aspects of the code.
7. If necessary, unpack the specimen.
8. Perform memory forensics of the infected lab system to supplement the other findings.
