Popescu, Chotchai Charoenngam, 1995-03-20 Critical Path Method CPM and Performance Evaluation and Review Technique PERT are widely recognized as the most effective methods of keeping large complex construction projects on schedule under budget and up to professional standards But these methods remain underused because they are poorly understood and due to a host of unfamiliar terms and applications may seem more complicated than they really are This encyclopedia brings together in one comprehensive volume all terms definitions and applications related to the time and cost management of construction projects While many of these terms refer to ancient and venerable building practices others have evolved quite recently and refer specifically to modern construction and management techniques Sources include hundreds of professional books trade journals and research publications as well as planning and scheduling software vendor literature The detailed glossary of all applicable terms includes across referenced listing of examples that describe real world applications for each term supplied An extensive bibliography covers all applicable books articles and periodicals available on project planning scheduling and control using CPM and related subjects This book is an important quick reference and desktop information resource for construction planners schedulers and controllers as well as civil engineers and project managers It is also the ultimate research tool for educators students or anyone who seeks to improve their understanding of the management of modern construction projects **Quality Function Deployment for Buildable and Sustainable Construction** Singhaputtangkul Natee, Sui Pheng Low, Evelyn A. L. Teo, 2015-10-16 This book focuses on the implementation of Quality Function Deployment QFD in the construction industry as a tool to help building designers arrive at optimal decisions for external envelope systems with sustainable and buildable design goals In particular the book

integrates special features into the conventional QFD tool to enhance its performance. These features include a fuzzy multi-criteria decision making method, fuzzy consensus scheme, and Knowledge Management System (KMS). This integration results in a more robust decision support tool known as the Knowledge based Decision Support System (KBDSS) QFD tool. As an example, the KBDSS QFD tool is used for the assessment of building envelope materials and designs for high rise residential buildings in Singapore in the early design stage. The book provides the reader with a conceptual framework for understanding the development of the KBDSS QFD tool. The framework is presented in a generalized form in order to benefit building professionals, decision makers, analysts, academics, and researchers who can use the findings as guiding principles to achieve optimal solutions and boost efficiency.
