Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

Introduction

0.1 Background

It is estimated by the International Labour Organization (ILO) that there are over 2.3 million deaths every year as a result of work activities, of which close to 2 million are due to ill-health, with the remainder being due to fatal accidents.

An organization is responsible for the health and safety of its workers and that of other persons under its control who are performing work on its behalf, including promoting and protecting their physical and mental health.

The adoption of an occupational health and safety (OH&S) management system can enable an organization to improve its OH&S performance in the enhancement of health and safety at work and to manage its OH&S risks.

NOTE 1 The term "occupational safety and health" ("OSH") has the same meaning as "occupational health and safety" ("OH&S").

NOTE 2 The term "worker" is defined to include both managerial and non-managerial persons.

ISO/CD 45001 International Organization for Standardization,2014 A new international standard for health and safety management is under development and due to publish in mid late 2016 ISO 45001 Occupational health and safety management systems requirements will support new areas of management systems to ensure better compatibility and systems governance making the implementation within an organization a lot smoother Once published the standard will apply to any organization wishing to establish and implement an internationally recognized occupational health and safety management system to reduce or minimize risks to personnel and other relevant parties maintain and constantly improve their health and safety performance keep all operations in line with their stated health and safety policies to an internationally recognized standard ISO 45001 has reached the first important stage in its development process the Committee Draft CD which is now available for you to purchase Safety Management Beyond Iso 45001 Andrew Yew,2019-11-04 Safety management in many organizations is simply a mirage and yet people rely on it to protect their lives and assets Management must come to understand that the implemented safety management systems may be sitting on weak foundations and may not perform when relied upon Many safety management systems are mere paper tigers and in reality just a paper exercise Valuable lessons can be learnt from how safety was mismanaged or had become dysfunctional in many organizations so that these pitfalls can be avoided Lessons can also be learnt from organizations that have successfully navigated their safety management despite the challenges discussed in the book Stakeholders need to scrutinize the effectiveness of the controls in place rather than be another participant in the safety charade To maximize payback and effectiveness a safety management system must attend to the needs of each different organization A one size fits all standardized solution will invariably be sub optimal Importantly the safety management system implemented must commensurate with the risk exposure of the organization **Establishing an occupational health & safety**
