

Comparing the latest version of ISO/DIS 45001.2 with OHSAS 18001

ISO/DIS 45001.2 is based on Annex SL – the new ISO high level structure (HLS) that brings a common framework to all management systems. This helps to keep consistency, align different management system standards, offer matching sub-clauses against the top level structure and apply common language across all standards. With the new standard in place, organizations will find it easier to incorporate their OHS management system into core business processes and get more involvement from senior management. The Plan-Do-Check-Act (PDCA) cycle can be applied to all processes and to the OHS management system as a whole. The diagram here (Figure 1) illustrates how Clauses 4 to 10 can be grouped in relation to PDCA.

Safety Management Beyond Iso 45001 Andrew Yew, 2019-11-04 Safety management in many organizations is simply a mirage and yet people rely on it to protect their lives and assets Management must come to understand that the implemented safety management systems may be sitting on weak foundations and may not perform when relied upon Many safety management systems are mere paper tigers and in reality just a paper exercise Valuable lessons can be learnt from how safety was mismanaged or had become dysfunctional in many organizations so that these pitfalls can be avoided Lessons can also be learnt from organizations that have successfully navigated their safety management despite the challenges discussed in the book Stakeholders need to scrutinize the effectiveness of the controls in place rather than be another participant in the safety charade To maximize payback and effectiveness a safety management system must attend to the needs of each different organization A one size fits all standardized solution will invariably be sub optimal Importantly the safety management system implemented must commensurate with the risk exposure of the organization The ISO
