Abstract A common framework for describing the life cycle of systems created by humans is established by this standard It defines a set of processes and associated terminology These processes can be applied at any level in the hierarchy of a system s structure Selected sets of these processes can be applied throughout the life cycle for managing and performing the stages of a system s life cycle This is accomplished through the involvement of all interested parties with the ultimate goal of achieving customer satisfaction This International Standard also provides processes that support the definition control and improvement of the life cycle processes used within an organization or a project Organizations and projects can use these life cycle processes when acquiring and supplying systems This International Standard concerns those systems that are man made and may be configured with one or more of the following hardware software data humans processes e g processes for providing service to users procedures e g operator instructions facilities materials and naturally occurring entities When a system element is software the software life cycle processes documented in ISO IEC 12207 2008 may be used to implement that system element The two standards are harmonized for concurrent use on a single project or in a single organization When the system element is hardware refer to other International Standards outside the scope of SC7 Keywords 15288 life cycle life cycle process software **The Certified Software Quality Engineer Handbook** Linda Westfall, 2016-09-23 A comprehensive reference manual to the Certified Software Quality Engineer Body of Knowledge and study guide for the CSQE exam *Systems Engineering* Standards South Africa, 2004 **Systems, Software and Services Process**
