**Java Network Programming and Distributed Computing** David Reilly, Michael Reilly, 2002 Java's rich comprehensive networking interfaces make it an ideal platform for building today's networked Internet centered applications components and Web services Now two Java networking experts demystify Java's complex networking API giving developers practical insight into the key techniques of network development and providing extensive code examples that show exactly how it's done David and Michael Reilly begin by reviewing fundamental Internet architecture and TCP/IP protocol concepts all network programmers need to understand as well as general Java features and techniques that are especially important in network programming such as exception handling and input output Using practical examples they show how to write clients and servers using UDP and TCP how to build multithreaded network applications and how to utilize HTTP and access the Web using Java The book includes detailed coverage of server side application development distributed computing development with RMI and CORBA and email enabling applications with the powerful JavaMail API For all beginning to intermediate Java programmers network programmers who need to learn to work with Java

*Java Input/output* Elliotte Rusty Harold, 1999 Intermediate programmers can refer to this guide to gain a solid understanding of text formatting in an object oriented language Java I O explores streams which provide simple ways to read and write data of different types and shows how to control number formatting use characters aside from the standard but outdated ASCII character set and get a head start on writing truly multi lingual software

*Location-Based Information Systems* Miguel A. Labrador, Alfredo J. Perez, Pedro M. Wightman, 2010-10-21 Drawing on the authors more than six years of R D in location based information systems LBIS as well as their participation in defining the Java ME Location API 2.0 Location Based Information Systems Developing Real Time Tracking Applications provides information and examples for creating real time LBIS based on GPS enabled cellular phones

**JavaTech, an Introduction to Scientific and Technical Computing with Java** Clark S. Lindsey, Johnny S. Tolliver, Thomas Lindblad, 2005-10-13 JavaTech is a practical introduction to the Java programming language with an emphasis on the features that benefit technical computing After presenting the basics of object oriented programming in Java it examines introductory topics such as graphical interfaces and thread processes It goes on to review

network programming and develops Web client server examples for tasks such as monitoring remote devices The focus then shifts to distributed computing with RMI Finally it examines how Java programs can access the local platform and interact with hardware Topics include combining native code with Java communication via serial lines and programming embedded processors An extensive web site supports the book with additional instructional materials JavaTech demonstrates the ease with which Java can be used to create powerful network applications and distributed computing applications It will be used as a textbook for programming courses and by researchers who need to learn Java for a particular task

**Java Developer's Resource** Elliotte Rusty Harold, 1997 Java Developer's Resource shows you how to write full featured dynamic graphical interactive Java applets and applications even if you don't have experience with other object oriented languages Starting with the simplest hello world applications you'll learn about Java variables arrays loops flow control and graphics as well as advanced language features such as file I/O and streams

**Big Java** Cay S. Horstmann, 2009-12-30 This book introduces programmers to objects at a gradual pace The syntax boxes are revised to show typical code examples rather than abstract notation This includes optional example modules using Alice and Greenfoot The examples feature annotations with dos and don'ts along with cross references to more detailed explanations in the text New tables show a large number of typical and cautionary examples New programming and review problems are also presented that ensure a broad coverage of topics In addition Java 7 features are included to provide programmers with the most up to date information

**Java I/O** Elliotte Rusty Harold, 2006-05-16 All of Java's Input Output I/O facilities are based on streams which provide simple ways to read and write data of different types Java provides many different kinds of streams each with its own application The universe of streams is divided into four large categories input streams and output streams for reading and writing binary data and readers and writers for reading and writing textual character data You're almost certainly familiar with the basic kinds of streams but did you know that there's a CipherInputStream for reading encrypted data And a ZipOutputStream for automatically compressing data Do you know how to use buffered streams effectively to make your I/O operations more efficient Java I/O 2nd Edition has been updated for Java 5.0 APIs and tells you all you ever need to know about streams and probably more A discussion of I/O wouldn't be complete without treatment of character sets and formatting Java supports the Unicode standard which provides definitions for the character sets of most written languages Consequently Java is the first programming language that lets you do I/O in virtually any language Java also provides a sophisticated model for formatting textual and numeric data Java I/O 2nd Edition shows you how to control number formatting use characters aside from the standard but outdated ASCII character set and get a head start on writing truly multilingual software Java I/O 2nd Edition includes Coverage of all I/O classes and related classes In depth coverage of Java's number formatting facilities and its support for international character sets
