The Geometry Of Multivariate Statistics By Thomas D Wickens:

The Geometry of Multivariate Statistics Thomas D. Wickens, 2014-02-25 A traditional approach to developing multivariate statistical theory is algebraic Sets of observations are represented by matrices linear combinations are formed from these matrices by multiplying them by coefficient matrices and useful statistics are found by imposing various criteria of optimization on these combinations Matrix algebra is the vehicle for these calculations A second approach is computational Since many users find that they do not need to know the mathematical basis of the techniques as long as they have a way to transform data into results the computation can be done by a package of computer programs that somebody else has written An approach from this perspective emphasizes how the computer packages are used and is usually coupled with rules that allow one to extract the most important numbers from the output and interpret them Useful as both approaches are particularly when combined they can overlook an important aspect of multivariate analysis To apply it correctly one needs a way to conceptualize the multivariate relationships that exist among variables This book is designed to help the reader develop a way of thinking about multivariate statistics as well as to understand in a broader and more intuitive sense what the procedures do and how their results are interpreted Presenting important procedures of multivariate statistical theory geometrically the author hopes that this emphasis on the geometry will give the reader a coherent picture into which all the multivariate techniques fit

Linear Regression Models John P. Hoffmann, 2021-09-12 Research in social and behavioral sciences has benefited from linear regression models LRMs for decades to identify and understand the associations among a set of explanatory variables and an outcome variable Linear Regression Models Applications in R provides you with a comprehensive treatment of these models and indispensable guidance about how to estimate them using the R software environment After furnishing some background material the author explains how to estimate simple and multiple LRMs in R including how to interpret their coefficients and understand their assumptions Several chapters thoroughly describe these assumptions and explain how to determine whether they are satisfied and how to modify the regression model if they are not The book also includes chapters on specifying the correct model adjusting for measurement error understanding the effects of influential observations and using the model with multilevel data The concluding chapter presents an alternative model logistic regression designed for binary or two category outcome variables The book includes appendices that discuss data management and missing data and provides simulations in R to test model assumptions Features Furnishes a thorough introduction and detailed information about the linear regression model including how to understand and interpret its results test assumptions and adapt the model when assumptions are not satisfied Uses numerous graphs in R to illustrate the model's results assumptions and other features Does not assume a background in calculus or linear algebra rather an introductory statistics course and familiarity with elementary algebra are sufficient Provides many examples using real world datasets relevant to various academic disciplines Fully integrates the R software environment in its numerous examples The book is

aimed primarily at advanced undergraduate and graduate students in social behavioral health sciences and related disciplines taking a first course in linear regression It could also be used for self study and would make an excellent reference for any researcher in these fields The R code and detailed examples provided throughout the book equip the reader with an excellent set of tools for conducting research on numerous social and behavioral phenomena John P Hoffmann is a professor of sociology at Brigham Young University where he teaches research methods and applied statistics courses and conducts research on substance use and criminal behavior
