James Gleick, 2011-03-31 Winner of the Royal Society Winton Prize for Science Books 2012 the world s leading prize for popular science writing This enhanced e book version contains twelve animations created by graphic design students from the world renowned Central Saint Martins college of Art and Design **In response to James Gleick's "The Information: A History, a Theory, a Flood"** Clinton Rogers, 2022-02-23 Academic Paper from the year 2022 in the subject American Studies Literature grade 100 Fort Hays State University FHSU language English abstract In James Gleick s whirlwind tour of information theory *The Information A History a Theory a Flood* 2011 he states that We have made many towers of Babel This sentence seems to present us with a double meaning Having occurred after a list of the disambiguation links for the term Babel in Wikipedia the We have made many towers of Babel is a statement denoting the number of objects listed with the name Babel On another level the sentence could be a descriptive statement about the entirety of his book and the long history of information and technology in general This short and poignant biblical story no longer than ten or so lines describes a uniting of all the disparate people groups of the world into a single language that renders communication effortless and using the newest form of architectural technology bricks they attempt to build a tower to the heavens This could be interpreted as an attempt to build towards the highest ideal for mankind or an attempt at meaning making God rewarded their hubris with a confounding of their language But it didn t have to be God who obstructed their great project because language itself has proven to be of such an unruly character We are still building our technological towers of Babel and humanity remains confounded in the process Gleick states Wikipedia evolves dendritically sending off new shoots in many directions In this it resembles the universe Gleick 2011 Discreetly hidden among a description of the transmogrification of the Wikipedia site which had proved to be an unprecedented source of information for its transmission and utility this phrase on a number of levels seems to encapsulate the evolution of our relationship to information and the

many twists and turns angles and blind spots that this story takes The analogy of the dendrite is also an apt description of two of the most complex and mysterious systems of information known to man the telescopic images of the cosmic networks of galaxies and the microscopic weblike network of neurons in the human brain The universe of entangled facts to be searched and processed for meaning is the way we view the objective world With every bit of information integrated we form new understandings and our knowledge branches out into ever new directions

Writing Computer and Information History William Aspray,2024-05-14 This is not a book about the history of computing or the history of information Instead it is a meta historical book about the research and writing of these types of history The formal presentation of historical research in the form of a publication often hides the process by which the topic was selected boundaries were drawn evidence was selected analytic approach was chosen and applied results were presented how this work fits into a larger body of scholarship the implicit goals and biases of the author and many other similar issues This process of learning about the various ways to carry out computer history or information history can be enriched by this collection of reflective essays by experienced scholars

discussing the craft that they practice This is a book that concerns both computer history and information history The first scholarship in computer history by professionally trained scholars began to appear in the 1970s so we are approaching a half century of research and publication in this area The field has generated numerous pieces of exemplary scholarship from various perspectives such as intellectual history of individual technologies business histories of firms economic histories of market sectors externalist histories of funding and professionalization and so on However the field continues to evolve especially as computing and communication technologies have drawn together in the form of the Internet and social media and with them a new set of scholars is participating drawn not only from the history of science and technology but also from the communication and media studies fields Powerful theories approaches and frameworks are being increasingly drawn more widely from both the humanities and the social sciences to inform the practice of computer history The scholars in this volume look at what s happened what s happening now and where historical scholarship in these disciplines is headed
