The Innovators by Walter Isaacson - A 30-minute Summary Instaread Summaries, PLEASE NOTE This is a summary of the book and NOT the original book The Innovators by Walter Isaacson A 30 minute Summary Inside this Instaread Summary Overview of the entire book Introduction to the important people in the book Summary and analysis of all the chapters in the book Key Takeaways of the book A Reader s Perspective Preview of this summary Chapter 1 Ada Byron the daughter of poet Lord Byron was tutored in math by her mother As a result she grew up comfortable with the combination of art and science She met Charles Babbage a science and math expert

Babbage demonstrated a model of a machine that he built called a Difference Engine that could solve polynomial equations. Ada was inspired by Babbage's Difference Engine and decided to undertake advanced lessons in mathematics. Ada became interested in mechanical weaving looms that used punch cards to create patterns in fabric. She recognized the similarity between the looms and Babbage's Difference Engine. Ada married William King, who became the Earl of Lovelace. This made her Ada Countess of Lovelace, or more commonly Ada Lovelace. Babbage had an idea for another machine. He wanted to create a computer that could carry out different operations. He called his concept an Analytical Engine. Babbage wanted to use punch cards in his new machine, similar to the ones used in looms. Ada Lovelace believed in his idea and imagined that it might be used to process other symbolic notations, such as for music and art, in addition to numbers. From 1842 to 1843, she wrote a translation of notes written by a young military engineer about the Analytical Engine. Her notes became more famous than the engineer's original article. Ada's notes covered four principles of historical significance. The first was that this would be a multi-purpose machine. The second was that it could process and act upon anything that could be expressed in symbols. The third was that the machine would work because of specific instructions given to it. Ada created this sequence of operations herself and wrote it up into a table and diagram. Her creation made her the world's first computer programmer. The fourth concept Ada wrote about was that computers could not think and could only perform as they were instructed. Babbage's machine was never built, and Ada never wrote another scientific paper, but their ideas were the beginnings of the digital age that came a century later.

Copies in Seconds David Owen, 2008-06-30

The first plain paper office copier which was introduced in 1960 and has been called the most successful product ever marketed in America is unusual among major high technology inventions in that its central process was conceived by a single person David Owen's fascinating narrative tells the story of the machine nobody thought we needed but now we can't live without Chester Carlson grew up in unspeakable poverty worked his way through junior college and the California Institute of Technology and made his discovery in solitude in the depths of the Great Depression He offered his big idea to two dozen major corporations among them IBM RCA and General Electric all of which turned him down So persistent was this failure of capitalist vision that by the time the Xerox 914 was manufactured by an obscure photographic supply company in Rochester New York Carlson's original patent had expired Xerography was so unusual and nonintuitive that it conceivably could have been overlooked entirely Scientists who visited the drafty warehouses where the first machines were built sometimes doubted that Carlson's invention was even theoretically feasible Drawing on interviews Xerox company archives and the private papers of the Carlson family David Owen has woven together a fascinating and instructive story about persistence courage and technological innovation a story that has never before been fully told
