The Chemistry Of Textile Fibres:

The Chemistry of Textile Fibres R. R. Mather, R. H. Wardman, 2011 Textiles are ubiquitous materials that many of us take for granted in our everyday lives We rely on our clothes to protect us from the environment for modesty to enhance our appearance and reflect our personality Beyond these traditional applications high performance fibres have been specifically developed for more demanding roles in protective garments industrial work wear car tyres parachutes and artificial arteries This is the only book to describe the chemistry of textile fibres at a level appropriate for A level students and first year undergraduates following courses in textile science and technology Readers with a background in chemistry and an interest in the principles of functional fibre development will also find it to be of value The book explains the characteristics required for polymers to be fibre forming the general physical properties needed from textile fibres and the chemistry of important natural and synthetic fibres The book also deals with the essential chemistry of high performance fibres that possess functionalities beyond those of materials traditionally used for apparel Later chapters describe methods of fibre enhancement and fibre blending

Chemistry of Textile Fibres Robert R Mather, Roger H Wardman, Sohel Rana, 2023-09-25 Ever wondered why a particular type of fibre is used for a certain application Readers of this book will gain an appreciation of the answer to this question and more through understanding the chemistry behind the properties of the fibres Providing a comprehensive overview of the various types of textile fibres that are available today ranging from natural fibres to high performance fibres that are very technologically advanced the book is a revised and updated new edition of a highly successful text Textiles are ubiquitous materials that many of us take for granted in our everyday lives We rely on our clothes to protect us from the environment and use them to enhance our appearance Textiles also find applications in transport healthcare construction and many other industries The third edition of The Chemistry of Textile Fibres updates a significant amount of the information provided in the previous editions such as the synthesis from renewable resources of monomers for producing synthetic fibres emerging applications of nanofibres production of electrically conducting fibres incorporating graphene and carbon nanotubes and nano finishing of textiles It also gives greater emphasis to those aspects of textile chemistry that combat adverse environmental impact including the chemical decomposition of synthetic polymers and strategies to reduce the damaging impact of microfibers It introduces the production of micro and nanomaterials from cellulose as an alternative to relatively toxic and non ecofriendly micro and nanomaterials produced from other sources together with the bio functionalisation of textiles Students following A level courses or equivalent and first year undergraduate students reading textile technology subjects at university will find this book a valuable source of information

The Chemistry of Textile Fibres, 2nd Edition Robert R. Maher, Roger H. Wardman, 2015-06-17 Textiles are ubiquitous materials that many of us take for granted in our everyday lives We rely on our clothes to protect us from the environment and use them to enhance our appearance Textiles also find applications in transport healthcare construction and many other

industries The revised and updated 2nd Edition of The Chemistry of Textile Fibres highlights the trend towards the synthesis from renewable resources of monomers for making synthetic fibres It contains new information on the influence of legislation and the concerns of environmental organisations on the use of chemicals in the textile industry New sections on genetically modified cotton anti microbial materials and spider silk have been added as well as a new chapter covering functional fibres and fabrics This book provides a comprehensive overview of the various types of textile fibres that are available today ranging from natural fibres to the high performance fibres that are very technologically advanced Readers will gain an appreciation of why particular types of fibre are used for certain applications through understanding the chemistry behind their properties Students following A level courses or equivalent and first year undergraduate students reading textile technology subjects at university will find this book a valuable source of information

Chemistry of Textile Fibres Marie Willis, Donna Foster, 2024 This book includes all the basics that are required to understand the world of textiles and explains details on the chemical technology of processes Incorporating new scientific techniques instruments characterization and processing methods the book features important technological advances from the past decade The book focuses on providing the most up to date information on The Chemistry of Textile Fibres and properties This book will prove to be immensely beneficial for supplementary reading in graduate and advanced undergraduate courses including polymer

fiber and textile chemistry and technology chemical processing of fibers chemical engineering and polymer processing and anyone interested in the textile industry Chemistry of the Textiles Industry C. Carr, 2012-12-06 The manufacture and processing of textiles is a complex and essential industry requiring many diverse skills to ensure profitability New products are continually being developed and reflect the energy and innovation of those working in the field This book focuses on the technological aspects of the chemical processing of textiles and on the modifications necessary for specific work environments Coverage ranges from fibre structure and its relationship to tensile properties textile aesthetics comfort physiology and end use performance through to the effect of domestic processing by the consumer on the textile product The industry is constantly under environmental pressure and the book examines the nature of environmental control and the development of alternative technology to produce less environmental impact In order to provide a balanced view of the current situation authors have been drawn from academia research institutes and industry to produce a text that will be useful to both industrial readers and university students In conclusion I would like to thank the authors for their dedication and their contributions The Textile Fibres Joseph Merritt Matthews, 1913 **Cotton Fiber Chemistry and Technology** Phillip J. Wakelyn, Noelle R. Bertoniere, Alfred D. French, Devron P. Thibodeaux, Barbara A. Triplett, Marie-Alice Rousselle, Jr. Goynes, J. Vincent Edwards, Lawrence Hunter, David D. McAlister, 2006-12-15 Annual cotton production exceeds 25 million metric tons and accounts for more than 40 percent of the textile fiber consumed worldwide A key textile fiber for over 5000 years this complex carbohydrate is also one of the leading crops to benefit from genetic engineering Cotton Fiber Chemistry and Technology offers a modern examination of cotton The Textile Fibres J. Merritt Matthews, 2017-09-17 Excerpt from The Textile Fibres Their Physical Microscopical and Chemical Properties The present book it is hoped will be of assistance to both the practical operator in textiles and the student of textile subjects It has been the outgrowth of a number of years of experience both in the teaching of textile chemistry and in the practical observation in the many mill problems which have come under the notice of the author in the practice of his profession The textile fibres form the raw materials for many of our greatest industries and hence it is of importance that the facts concerning them should be systematized into some form of scientific knowledge The author has attempted however not to allow the purely scientific phase of the subject to overbalance the practical bearing of such knowledge on the every day problems of industry About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books Find more at www.forgottenbooks.com This book is a reproduction of an important historical work Forgotten Books uses state of the art technology to digitally reconstruct the work preserving the original format whilst repairing imperfections present in the aged copy In rare cases an imperfection in the original such as a blemish or missing page may be replicated in our edition We do however repair the vast majority of imperfections successfully any imperfections that remain are intentionally left to preserve the state of such historical works

The Chemical Technology of Textile Fibres Georg von Georgievics,1902 PREFACE IN the present volume dealing with the Chemical Technology of the Textile Fibres except as concerns the dye stuffs which will be treated in a separate work the author has been obliged to con dense the available matter as much as possible in order to preserve the form of a text book Nevertheless it seemed necessary in certain cases in the interests of the book to give definite data and an exact description of individual processes In such instances the details have been gathered exclusively either from the authors personal experience or from reliable sources The most important part of the book is the chapter treating of dyeing whilst on the other hand the subject of printing had to be dealt with in a more general fashion the materials being less suitable for treatment in text book style The author thinks it desirable to point out that in the present work an attempt has been made to completely separate the chemical and mechanical technology of the subject a standpoint he considers justified by the extensive area occupied by each of these branches Hence only a few sketches of apparatus have been given and the methods of dressing the finished goods have been described very briefly since they almost entirely belong to the domain of mechanical technology GEOEG VON GEOEGIEVICS Artificial Fibres Mineral Vegetable Cellulose Cotton Bombax Cotton Vegetable Silk
