controversial subject in veterinary medicine As an oncologist I want to make recommendations based on published data and science of which there is little in the field of nutrition for veterinary oncology There are so many ways to feed the body to maintain health decrease inflammation and naturally promote healing for several conditions For some chronic diseases such as chronic kidney disease nutrition is the main source of therapy Unfortunately for cancer there is less data Cancer is also diverse with highly variable outcomes depending on cancer type and treatment modality chosen With few publications showing proven benefits I often feel I cannot make strong recommendations about dietary therapy for my cancer patients It would be nice if more were known However Drs Cowden and McMillan have compiled a comprehensive book of what is known They have reviewed books and peer reviewed articles on cancer nutrition in pets to create a how to guide and provide information all in one place They did this for you having been in your shoes No more scouring the internet uncertain if the recommendations are trustworthy and feeling overwhelmed by conflicting opinions Think of this book as a resource providing you with everything you need to know about complete nutrition for your dog with cancer **Samson's Story** Gale
