

STEPS OF PLANT TISSUE CULTURE

1

A plant tissue (explant) is scraped from the parent plant

2

The explant is placed on the growth medium supplied with nutrients and phytohormones

3

The explant loses specificity and divides to form a mass of undifferentiated cells (callus)

4

Over time, small plantlets begin to develop from the callus

5

The plantlets are transplanted into pots or trays filled with nutrient-rich compost

A Cultural History of Plants in the Modern Era Stephen Forbes, 2023-12-14 A Cultural History of Plants in the Modern Era covers the period from 1920 to today a time when population growth industrialization global trade and consumerism have fundamentally reshaped our relationship with plants. Advances in agriculture science and technology have revolutionised the ways we feed ourselves whilst urbanization and industrial processing have reduced our direct connection with living plants. At the same time our understanding of both ecology and conservation have greatly increased and our appreciation of the meanings and aesthetics of plants continue to suffuse art and everyday culture. The modern era has witnessed a revolution in both the valuation and the destruction of the natural world more than ever before we understand that the vitality of our relationship with plants will shape our future. The 6 volume set of the Cultural History of Plants presents the first comprehensive history of the uses and meanings of plants from prehistory to today. The themes covered in each volume are plants as staple foods plants as luxury foods trade and exploration plant technology and science plants and medicine plants in culture plants as natural ornaments the representation of plants. Stephen Forbes is an independent scholar and writer based in Australia. Volume 6 in the Cultural History of Plants set.
