Can Publish Your Journal Article Gilbert C. Gee, 2023-11-27 You've completed your research and want to publish it in a peer-reviewed journal. Author Gilbert C. Gee is here to help sharing what he learned as a writer, reviewer, and Editor in Chief and calling on other journal editors to offer their advice. You Can Publish Your Journal Article will not only help you write your paper but more importantly be more likely to succeed in peer review. The book has four main premises: that writing involves a relationship between you and your readers and that your research joins an ongoing conversation in the field; that good writing is rewriting and revision is critical; that people who write daily are more productive than those who binge write; and finally that persistency wins, so don't give up when you get a rejection. With chapters offering practical advice on selecting the right journal, peer review, the methods section, displaying your data, writing the results and discussion sections, the book concludes with short essays from invited journal editors about how to avoid common mistakes and ensure success.

Science Dynamics and Research Production Nikolay K. Vitanov, 2016-08-01 This book deals with methods to evaluate scientific productivity In the book statistical methods deterministic and stochastic models and numerous indexes are discussed that will help the reader to understand the nonlinear science dynamics and to be able to develop or construct systems for appropriate evaluation of research productivity and management of research groups and organizations The dynamics of science structures and systems is complex and the evaluation of research productivity requires a combination of

qualitative and quantitative methods and measures The book has three parts The first part is devoted to mathematical models describing the importance of science for economic growth and systems for the evaluation of research organizations of different size The second part contains descriptions and discussions of numerous indexes for the evaluation of the productivity of researchers and groups of researchers of different size up to the comparison of research productivities of research communities of nations Part three contains discussions of non Gaussian laws connected to scientific productivity and presents various deterministic and stochastic models of science dynamics and research productivity The book shows that many famous fat tail distributions as well as many deterministic and stochastic models and processes which are well known from physics theory of extreme events or population dynamics occur also in the description of dynamics of scientific systems and in the description of the characteristics of research productivity This is not a surprise as scientific systems are nonlinear open and dissipative

The SSCI Syndrome in Higher Education Chuang Prudence Chou, 2014-02-07 As a result of the world class university rankings many governments adopt public incentives and sanctions to push universities to excel Above all the better faculty research publication in SSCI and SCI journals the more resources and social prestige universities will obtain This timely book attempts to relate these dilemmas in Taiwan to many non English speaking counterparts which also struggle with the worldwide SSCI syndrome As Taiwan's higher education system similar to that of some other countries has been recently devastated by the SSCI based quantitative evaluations of academic performance in terms of its adverse impacts on the balances between teaching vs research qualitative vs quantitative evaluations globally oriented English vs locally oriented non English publications and publications in academic journals vs books The SSCI Syndrome in Higher Education is a long overdue study that offers a systematic comprehensive coverage of the above mentioned SSCI syndrome on the dynamics of Taiwan's academe This book definitely helps fill an important gap in the literature on Taiwan's higher education system Tsung Chi Professor of Politics Occidental College USA Prudence Chou's book addresses an academy on crisis caused by the ceaseless hype over university rankings It further confirms that who comes out on top depends on who is doing the ranking To save the heart and soul out of the Taiwanese academy this book makes a cogent argument for culturally responsive research in the social sciences and humanities Gerard A Postiglione Professor and Head Division of Policy Administration and Social Sciences Director Wah Ching Center of Research on Education in China The University of Hong Kong A spectre is haunting almost all universities in the world including Taiwan the spectre of indexization Academics particularly social scientists are panting from the pressure of globally spread neoliberal ideology and market based principles Collegiality on campus in the good old days has declined and managerialism gained power instead Competitive funding and university rankings are excessively emphasized and research results are required to be internationalized i.e. published in English Although this book is a case study of so called SSCI syndrome in Taiwan the problems and challenges as well as prescription contained here are common to all academics especially those in the non English speaking countries positioned

as peripheral Yutaka Otsuka Professor of Hiroshima University President of Japan Comparative Education Society The danger with SSCI syndrome is that it encourages social studies in nonwestern societies to dissociate themselves from local contexts reflecting a particular view of what is claimed to be universal that is informed only by the Western especially English speaking world It raises the question of what counts as scholarship and defines what knowledge is and who may claim competence in it This volume serves us well as a timely reminder of such a great danger Rui Yang Professor Faculty of Education University of Hong Kong Handbook of Bibliometric Indicators Roberto Todeschini, Alberto Baccini, 2016-08-22 At last the first systematic guide to the growing jungle of citation indices and other bibliometric indicators Written with the aim of providing a complete and unbiased overview of all available statistical measures for scientific productivity the core of this reference is an alphabetical dictionary of indices and other algorithms used to evaluate the importance and impact of researchers and their institutions In 150 major articles the authors describe all indices in strictly mathematical terms without passing judgement on their relative merit From widely used measures such as the journal impact factor or the h index to highly specialized indices all indicators currently in use in the sciences and humanities are described and their application explained The introductory section and the appendix contain a wealth of valuable supporting information on data sources tools and techniques for bibliometric and scientometric analysis for individual researchers as well as their funders and publishers
