Failure Modes and Mechanisms in Electronic Packages P. Singh,Puligandla Viswanadham,2012-12-06 Those of us who grew up in the through hole age of electronic packaging are probably more amazed and appreciative than are our children at the incredible growth of electronic performance capability My son an electrical engineering student seems almost to take for granted the innovations that leave me somewhat awestruck at times Electronic circuit designers delight in packing more punch into less volume while reminding us that their job has become increasingly challenging The lay person also has learned from the media that the industry has been working wonders in shrinking the transistor and expanding the power of the chip Much attention is focussed on the silicon and on the marvelous production and entertainment tools we now see in our offices and homes Between the silicon and the end product lies the less publicized world of circuit level packaging We leave it to a cadre of technologists to take the schematics and parts lists and to develop the processes that tum the designers concepts into physical reality And while the silicon transistor is shrinking the engineering challenges of packaging multiple chips and associated components into increasingly dense subsystems are growing Further the transistor may have to function without failure through severe industrial or military environments over the lifetime of the product Defense Standardization Program Journal ,2005 **Lead-Free Soldering** Jasbir Bath,2007-06-26 The past few years have seen major developments in soldering materials and processes for electronics assembly manufacture due to the movement from tin lead to lead free soldering The removal of lead from electronics solders due to environmental considerations first developed with proposed US legislation in the early 1990s At that time the alternatives had not been fully explored so a ban on the use of lead in electronic solders was put on hold However the seed was sown for development with various projects

initiated during the 1990s in Europe the Americas and Asia Based on government pressures Japan OEMs began to move to lead free solder products from 1998 and this combined with the European Union ROHS Restriction of Hazardous Substances legislation enacted in 2006 drove the global manufacture of electronics consumer products with le free solders From 1998 to the present the development of lead free solder materials and processes has progressed to such an extent that development work moving forward will typically only concentrate on lead free solders and components rather than tin lead solders and components This book aims to give the latest information on development of the lead free soldering materials and processes and identify where more work is needed The chapters of the book describe legislation alloys reflow wave rework reliability backward and forward process compatibility PCB surface finishes and PCB laminates and standards affecting the general lead free soldering arena

Fine Pitch Surface Mount Technology Phil Marcoux,2013-11-27 Fine pitch high lead count integrated circuit packages represent a dramatic change from the conventional methods of assembling electronic components to a printed interconnect circuit board To some these FPTpackages appear to bean extension of the assembly technology called surface mount or SMT Many of us who have spent a significant amount of time developing the process and design techniques for these fine pitchpackages haveconcluded that these techniquesgobeyondthose commonly used for SMT In 1987 the presentauthor convincedofthe uniqueness ofthe assembly and design demands ofthese packages chaired a joint committee where the members agreed to use fine pitch technology FPT as the defining term for these demands The committee was unique in several ways one being that it was the first time three U S standards organizations the IPC Lincolnwood IL theEIA Washington D C and theASTM Philadelphia cametogether tocreate standards before a technology was in high demand The term fine pitch technology and its acronym FPT have since become widely accepted in the electronics industry The knowledge of the terms and demands of FPT currently exceed the usage of FPT packaged components but this is changing rapidly because of the size performance and cost savings of FPT I have resisted several past invitations to write other technical texts However I feel there are important advantages and significant difficulties to be encountered with FPT

Index of Specifications and Standards ,2005 **Surface Mount Technology** Ray Prasad,2013-11-27 A foreword is usually prepared by someone who knows the author or who knows enough to provide additional insight on the purpose of the work When asked to write this foreword I had no problem with what I wanted to say about the work or the author I did however wonder why people read a foreword It is probably of value to know the background of the writer of a book it is probably also of value to know the background of the individual who is commenting on the work I consider myself a good friend of the author and when I was asked to write a few words I felt honored to provide my view of Ray Prasad his expertise and the contribution that he has made to our industry This book is about the industry its technology and its struggle to learn and compete in a global market bursting with new ideas to satisfy a voracious appetite for new and innovative electronic products I had the good fortune to be there at the beginning or almost and have witnessed the growth and excitement in the

opportunities and challenges afforded the electronic industries engineering and manufacturing talents In a few years my involvement will span half a century

The Mechanics of Solder Alloy Wetting and Spreading Michael Hosking, Frederick G. Yost, 2012-12-06 In 1992 Congress passed the Defense Manufacturing Engineering Education Act with the intent of encouraging academic institutions to increase their emphasis on manufacturing curricula The need for this incentive to integrate the academic and industrial communities was clear gaps in manufacturing science were inhibiting the evolution of new manufacturing technologies that are required for the U S to maintain a competitive posture in the world marketplace The Army Research Laboratory and Sandia National Laboratories sought to contribute to the congressional intent by initiating a new series of graduate level college textbooks The goal was to focus next generation scientists onto issues that were common to the needs of the commercial market the affordability of DoD weapons systems and the mobilization readiness of the U S Armed Forces The textbook The Mechanics of Solder Wetting and Spreading was written in this spirit by nationally renowned scientists for academe and industry Researchers using the book are encouraged to formulate programs that will establish scientific correlations between manufacturing process controls and product reliability Such correlations are essential to the building of a new electronics industry which is based upon the futuristic concepts of Virtual Factories Prototyping and Testing
