The Lapua Scenar Bullet:

Elements of Exterior Ballistics George Klimi, 2016-03-08 *Elements of Exterior Ballistics Long Range Shooting* is a concise but comprehensive instructive book on exterior ballistics applied into long range shooting with small arms. The foundations of the book are innovatively related to the exterior ballistics of point mass projectile as well as to the new findings and contemporary ballistics methods presented in my preceding books. The book is designed for exterior ballistics professionals, amateurs and competitive shooters interested in long range shooting and in general in exterior ballistics. Though the exterior ballistics applications are related to long range shootings with small arms, the reader can easily extend the ballistics techniques to the artillery fire. The book has a large number of illustration examples to demonstrate the exterior ballistics solving techniques and to help the readers understand the ballistics concepts and principles as well as the challenging theoretical and practical applications.

Exterior Ballistics George Klimi, 2014-01-27 The noteworthy findings and innovative methods of predicting projectile trajectory introduced in my books *Exterior Ballistics A New Approach* EBNA Xlibris 2010 and *Exterior Ballistics with Applications* EBA3e Xlibris third edition December 2011 require a methodical approach and further development. As a result, the amateurs and professionals interested in exterior ballistics of firearms and especially in long range shooting with small arms have a new book *Exterior Ballistics The Remarkable Methods* EBRM that aims to enrich the foundations of modern exterior ballistics and to lessen the complexity of physics and mathematics techniques in use. *Exterior Ballistics The Remarkable Methods* is a book that combines and develops further the methods introduced in EBA3e EBNA and in the *Exterior Ballistics of Small Arms* EBSA Xlibris 2009. The foundations of the book are mainly the findings and the innovative ballistics methods presented in EBA3e and EBNA. The remarkable methods of exterior ballistics presented in this new book include: The methods of determining the function of resistance G_v of a given bullet i 1 using range tables or the experimental data measurements of three or four coordinates at the points of projectile impact; The model of Tangent Law of Trajectory Refraction and the related set of formulas that we use to study the trajectories of projectiles in nonstandard atmosphere; Series expansion method and the techniques of second to sixth order parabolas we employ to predict with great accuracy the projectile trajectory; The exceptional Siacci's methods that we apply as well for the projectile trajectory in nonstandard atmosphere and in inclined shooting combined with the tangent law of trajectory refraction. It is important to note that using the similarity laws of fluid dynamics we have obtained the tangent law of projectile refraction which represents a progress with respect to Newton Snell's law on projectile refraction. For better understanding of the information presented in the book, the reader should refer to my three preceding books on exterior ballistics already published by Xlibris, although most of the material is self-contained and clear enough to be accessed and assimilated by a wide range of readers. The system of units used in the book is the International System SI. For readers that are unfamiliar with the SI system, it is not difficult to become accustomed and use the materials presented in the book to benefit from the simple illustrations.
