The Fourth Industrial Revolution By Klaus Schwab:

The Fourth Industrial Revolution Klaus Schwab, 2016-01-15 **Shaping the Future of the Fourth Industrial Revolution** Klaus Schwab, Nicholas Davis, 2018-11-06 World Economic Forum Founder and Executive Chairman Klaus Schwab offers a practical companion and field guide to his previous book *The Fourth Industrial Revolution*. Today technology is changing everything: how we relate to one another, the way we work, how our economies and governments function, and even what it means to be human. One need not look hard to see how the incredible advances in artificial intelligence, cryptocurrencies, biotechnologies, and the Internet of Things are transforming society in unprecedented ways. But the Fourth Industrial Revolution is just beginning, says Schwab. And at a time of such tremendous uncertainty and such rapid change, he argues, it's our actions as individuals and leaders that will determine the trajectory our future will take. We all have a responsibility as citizens, businesses, and institutions to work with the current of progress, not against it, to build a future that is ethical, inclusive, sustainable, and prosperous. Drawing on contributions from 200 top experts in fields ranging from machine learning to geoengineering to nanotechnology to data ethics, Schwab equips readers with the practical tools to leverage the technologies of the future to leave the world better, safer, and more resilient than we found it.

Shaping the Fourth Industrial Revolution Klaus SCHWAB, 2018-10-29 *The Fourth Industrial Revolution* is changing everything from the way we relate to each other to the work we do, the way our economies work, and what it means to be human. We cannot let the brave new world that technology is currently creating simply emerge. All of us need to help shape the future we want to live in. But what do we need to know and do to achieve this? In *Shaping the Fourth Industrial Revolution*, Klaus Schwab explores how people from all backgrounds and sectors can influence the way that technology transforms our world. Drawing on contributions by more than 200 of the world's leading technology, economic, and sociological experts, to present a practical guide for citizens, business leaders, social influencers, and policy makers, this book outlines the most important dynamics of the technology revolution, highlights important stakeholders that are often overlooked in our discussion of the latest scientific breakthroughs, and explores 12 different technology areas central to the future of humanity. Emerging technologies are not predetermined forces out of our control, nor are they simple tools with known impacts and consequences. The exciting capabilities provided by artificial intelligence, distributed ledger systems, and cryptocurrencies, advanced materials, and biotechnologies are already transforming society. The actions we take today and those we don't will quickly become embedded in ever more powerful technologies that surround us and will very soon become an integral part of us. By connecting the dots across a range of often misunderstood technologies and by exploring the practical steps that individuals, businesses, and governments can take, *Shaping the Fourth Industrial Revolution* helps equip readers to shape a truly desirable future at a time of great uncertainty and change.

Artificial Intelligence and the Future of Defense Stephan De Spiegeleire,Matthijs Maas,Tim Sweijts,2017-05-17 Artificial intelligence AI is on everybody s minds these days Most of the world s leading companies are making massive investments in it Governments are scrambling to catch up Every single one of us who uses Google Search or any of the new digital assistants on our smartphones has witnessed first hand how quickly these developments now go Many analysts foresee truly disruptive changes in education employment health knowledge generation mobility etc But what will AI mean for defense and security In a new study HCSS offers a unique perspective on this question Most studies to date quickly jump from AI to autonomous mostly weapon systems They anticipate future armed forces that mostly resemble today s armed forces engaging in fairly similar types of activities with a still primarily industrial kinetic capability bundle that would increasingly be AI augmented The authors of this study argue that AI may have a far more transformational impact on defense and security whereby new incarnations of armed force start doing different things in novel ways The report sketches a much broader option space within which defense and security organizations DSOs may wish to invest in successive generations of AI technologies It

suggests that some of the most promising investment opportunities to start generating the sustainable security effects that our polities societies and economies expect may lie in in the realms of prevention and resilience Also in those areas any large scale application of AI will have to result from a preliminary open minded on all sides public debate on its legal ethical and privacy implications The authors submit however that such a debate would be more fruitful than the current heated discussions about killer drones or robots Finally the study suggests that the advent of artificial super intelligence i e AI that is superior across the board to human intelligence which many experts now put firmly within the longer term planning horizons of our DSOs presents us with unprecedented risks but also opportunities that we have to start to explore The report contains an overview of the role that intelligence the computational part of the ability to achieve goals in the world has played in defense and security throughout human history a primer on AI what it is where it comes from and where it stands today in both civilian and military contexts a discussion of the broad option space for DSOs it opens up 12 illustrative use cases across that option space and a set of recommendations for especially small and medium sized defense and security organizations
