The Living Planet A Portrait Of The Earth By David:

The living planet David Attenborough,1985 **The Living Planet** Norman Maclean,2023-04-20 Since 1970 there has been an overall decline in wildlife populations in the order of 52% Freshwater species populations have declined by 76% species populations in Central and South America have declined by 83% and in the Indo Pacific by 67% These are often not complete extinctions but large declines in the numbers of animals in each species as well as habitat loss This presents us with a tremendous opportunity before it is too late to rescue many species This book documents the present state of wildlife on a global scale using a taxonomic approach and serving as a one stop place for people involved in conservation to be able to find out what is in decline and the success stories that have occurred to bring back species from the brink of extinction primarily due to conservation management techniques as models for what we might achieve in the future *Living Planet* David Attenborough,2021-10-14 A new fully updated narrative edition of David Attenborough's seminal biography of our world The Living Planet Nowhere on our planet is devoid of life Plants and animals thrive or survive within every extreme of climate and habitat that it offers Single species and often whole communities adapt to make the most of ice cap and tundra forest and plain desert ocean and volcano These adaptations can be truly extraordinary fish that walk or lay eggs on leaves in mid air snakes that fly flightless birds that graze like deer and bears that grow hair on the soles of their feet In The Living Planet David Attenborough's searching eye unfailing curiosity and infectious enthusiasm explain and illuminate the intricate lives of these colonies from the lonely heights of the Himalayas to the wild creatures that have established themselves in the most recent of environments the city By the end of this book it is difficult to say which is the more astonishing the ingenuity with which individual species contrive a living or the complexity of their interdependence on each other and on the habitations provided by our planet In this new edition the author with the help of zoologist Matthew Cobb has added all the most up to date discoveries of ecology and biology as well as a full colour 64 page photography section He also addresses the urgent issues facing our living planet climate change pollution and mass extinction of species The Living Planet Sir David Attenborough,1984 Living Planet ,1991 *The Living Planet* David Attenborough,1984 *Living Planet* ,1991

Darwin's On the Origin of Species Daniel Duzdevich,2018-11-01 An essential new edition of the 19th century scientific masterpiece that translates Darwin's Victorian prose into modern English Most useful Walter Brock Columbia University Charles Darwin's most famous book On the Origin of Species is without question one of the most important books ever written Yet many students have great difficulty understanding it While even the grandest works of Victorian English can be a challenge for modern readers Darwin's dense scientific prose is especially difficult to navigate For an era in which Darwin is more talked about than read doctoral student Daniel Duzdevich offers a clear modern English rendering of Darwin's first edition Neither an abridgement nor a summary this version might best be described as a translation for contemporary English readers A monument to reasoned insight the Origin illustrates the value of extensive reflection carefully gathered

evidence and sound scientific reasoning By removing the linguistic barriers to understanding and appreciating the Origin this edition brings 21st century readers into closer contact with Darwin s revolutionary ideas Language of the Earth Frank H. T. Rhodes, Richard O. Stone, Bruce D. Malamud, 2011-08-26 Man s complex relationship to planet Earth is explored in this second edition of the landmark anthology edited by Frank Rhodes and Bruce Malamud This volume provides a portrait of the planet as experienced not just by scientists but by artists aviators poets philosophers novelists historians and sociologists as well A unique collection that bridges the gap between science and humanities Contains writings by scientists artists aviators poets philosophers novelists historians and sociologists including Charles Darwin Dane Picard Rachel Carson John Muir Mark Twain and Archibald Geikie Represents the human experience over the centuries covering a span of 2 500 years Reflects the planet s extraordinary physical diversity The previous edition was voted one of the 25 Great Books of Geology by readers of the Journal of Geological Education this is a very worthwhile read with something for everyone interested in geography earth systems and geology natural history or the general environment Robert A Francis King s College London Progress in Physical Geography

Insights from Book Translations on the International Diffusion of Knowledge Isabelle Yin Fong Sin, 2011 Increases in the stock of ideas possessed by societies are central to modern economic growth The implications of idea flows are striking Klenow and Rodriguez Clare 2005 estimate world production would be just 6% of its current level if countries did not share ideas Yet although theoretical economists have studied ideas and their diffusion extensively empirical studies are scarce because ideas are inherently difficult to measure Previous empirical studies of idea flows have tended to use proxies such as trade flows foreign direct investment migration and patent citations However with the exception of the latter these measures are not pure idea flows and do not capture the key properties of ideas namely non rivalry and disembodiedness My research proposes a novel measure of idea flows namely book translations and uses it to study the factors that affect the international diffusion of ideas Book translations are an attractive way to quantify idea flows because they are both non rival and disembodied they are a pure measure of idea flows rather than a by product of a process such as trade or migration and their key purpose is to make the ideas contained in the book accessible to speakers of another language In chapter 2 I outline the economics literature on ideas and their diffusion I motivate and discuss book translations as a measure of idea flows and provide a framework for thinking about when translations are likely to occur I describe the translation data in chapter 3 The source of the data is an international bibliography of translations collected by the United Nations Educational Scientific and Cultural Organization From this bibliography I compile a data set of over 2 million translations published in 80 countries since the 1949 including detailed information on each title translated I then document the main patterns of translation flows In chapter 4 I employ a gravity framework to study how distance affects translation flows between countries This sheds light both on the barriers to international idea diffusion and on the underlying causes of the negative relationship between distance and trade Translations differ from trade in that they have zero transportation

costs but they are subject to similar search and information costs and costs of forming contracts I estimate a gravity model where bilateral translation flows vary with the sizes of the countries and the distance between them and find the elasticity of translations with respect to distance to be between 0.3 and 0.5 for the 1990s these values are significantly smaller than the equivalent elasticity for trade found in the literature suggesting a significant role for transportation costs in the distance effect on trade In addition I present several pieces of evidence that suggest supply side frictions play a larger role in the distance effect on translations than do consumer preferences For instance the speed with which titles are translated which is likely to largely capture supply frictions as opposed to demand factors decreases significantly with distance Finally in joint work with Ran Abramitzky chapter 5 I study how the collapse of the Communist regime in Eastern Europe at the close of the 1980s affected the international diffusion of ideas We show that while translations between Communist languages decreased by two thirds with the collapse Western to Communist translations increased by a factor of seven and reached Western levels Convergence was full in economically beneficial fields such as sciences and only partial in culturally beneficial fields such as history The effects were larger for more Western oriented countries These findings help us understand how institutions shape the international diffusion of knowledge and demonstrate the importance of preferences in determining the type of ideas that diffuse into a country
