known as secondary metabolites and including alkaloids glycosides essential oils and other miscellaneous active substances. These metabolites help plants cope with environmental and/or external stimuli in a rapid reversible and ecologically meaningful manner. Additionally, environmental factors play a crucial role in regulating the metabolic yield of these biologically active molecules. Understanding how medicinal plants respond to environmental perturbations and climate change could open new frontiers in plant production and in agriculture where successive innovation is urgently needed due to the looming challenges in connection with global food security and climate change.
