Handbook Of Ocean Container Transport Logistics Making Global Supply Chains Effective International Series In Operations Research Management Science:

Handbook of Ocean Container Transport Logistics Chung-Yee Lee, Qiang Meng, 2014-12-13 This book is focused on the impact of ocean transport logistics on global supply chains It is the first book solely dedicated to the topic linking the interaction of parties along this chain including shippers terminal operators and line carriers While ocean container transport logistics has been greatly studied there are many important issues that have yet to receive the attention they deserve The editors and contributing authors of *Ocean Container Transport Logistics Making Global Supply Chain Effective* seek to address these topics and shed new light on the subject The book is divided into three parts Part I examines the innovation trends competition and business model of container terminal operations In Part II the book looks at how tactical and operational management is used in shipping liners The chapters cover topics such as empty container repositioning slow steaming routing network design and disruption management Finally Part III explores at shippers and global supply chain management with chapters on transportation service procurement hinterland transportation green corridors as well as competition and co operation in maritime logistics operations The eighteen chapters of the book all highlight the immediate effect of ocean transport logistics on global supply chain

Dynamic Shipping and Port Development in the Globalized Economy Paul Yae-Woo Lee, Kevin Cullinane, 2016-04-29 This two volume book presents an in depth analysis of many of the most important issues facing today s shipping and port sectors Volume 1 of *Dynamic Shipping and Port Development in the Globalized Economy* focuses on the application of theory to practice in Maritime Logistics

Towards Green Marine Technology and Transport Carlos Guedes Soares, Roko Dejhalla, Dusko Pavletic, 2015-09-04 *Towards Green Marine Technology and Transport* covers recent developments in marine technology and transport The book brings together a selection of papers reflecting fundamental areas of recent research and development in the fields of ship hydrodynamics marine structures ship design shipyard technology ship machinery maritime transportation

Sustainable Shipping Harilaos N. Psaraftis, 2019-02-11 International shipping is currently at a crossroads The decision of the International Maritime Organization IMO in April 2018 to adopt an Initial Strategy so as to achieve by 2050 a reduction of at least 50% in maritime greenhouse gas GHG emissions vis vis 2008 levels epitomizes the last among a series of recent developments as regards sustainable shipping It also sets the scene on what may happen in the future Even though many experts and industry circles believe that the IMO decision is in line with the COP21 climate change agreement in Paris in 2015 others disagree either on the ground that the target is not ambitious enough or on the ground that no clear pathway to reach the target is currently visible This book takes a cross disciplinary view of the various dimensions of the maritime transportation sustainability problem Cross disciplinary means that a variety of angles are used to examine the book topics and these mainly include the technological angle the economics angle the logistics angle and the environmental angle The book reviews models

that can be used to evaluate decisions policy alternatives and trade offs For sustainable shipping a spectrum of technical logistics based and market based measures are being contemplated All may have important side effects as regards the economics and logistics of the maritime supply chain including ports and hinterland connections The objective to attain an acceptable environmental performance while at the same time respecting traditional economic performance criteria so that shipping remains viable is and is likely to be a central goal for both industry and policy makers in the years ahead At the same time policy fragmentation is likely to create distortions of competition and sub optimal solutions This book attempts to address these issues and identify better solutions Sustainable Shipping A Cross Disciplinary View includes chapters that cover many relevant topics These include a general view of maritime transport sustainability green ship technologies information and communication technologies ICTs for sustainable shipping green tramp ship routing and scheduling green liner network design and speed optimization Market based measures oil pollution ship recycling sulphur emissions ballast water management alternative fuels and green ports are also covered The book concludes by discussing prospects for the future with a focus on the IMO Initial Strategy This book contains a unique wealth of information on sustainable shipping The knowledge it provides is rigorous complete and well supported by statistics technical reports and scientific references The treatment of the various topics is not only informative but also analytical and critical Gilbert Laporte Maritime Economics Logistics 12 May 2020 **Modelling Empty Container Repositioning Logistics** Dong-Ping Song,Jingxin

Dong,2022-01-20 The book takes the inventory control perspective to tackle empty container repositioning logistics problems in regional transportation systems by explicitly considering the features such as demand imbalance over space dynamic operations over time uncertainty in demand and transport and container leasing phenomenon The book has the following unique features First it provides a discussion of broad empty equipment logistics including empty freight vehicle redistribution empty passenger vehicle redistribution empty bike repositioning empty container chassis repositioning and empty container repositioning ECR problems The similarity and unique characteristics of ECR compared to other empty equipment repositioning problems are explained Second we adopt the stochastic dynamic programming approach to tackle the ECR problems which offers an algorithmic strategy to characterize the optimal policy and captures the sequential decision making phenomenon in anticipation of uncertainties over time and space Third we are able to establish closed form solutions and structural properties of the optimal ECR policies in relatively simple transportation systems Such properties can then be utilized to construct threshold type ECR policies for more complicated transportation systems In fact the threshold type ECR policies resemble the well known s S and s Q policies in inventory control theory These policies have the advantages of being decentralized easy to understand easy to operate quick response to random events and minimal on line computation and communication Fourth several sophisticated optimization techniques such as approximate dynamic programming simulation based meta heuristics stochastic approximation perturbation analysis and ordinal optimization

methods are introduced to solve the complex stochastic optimization problems The book will be of interest to researchers and professionals in logistics transport supply chain and operations research The Routledge Handbook of Maritime Management Photis M. Panayides,2019-04-30 This handbook provides a wide ranging coherent and systematic analysis of maritime management policy and strategy development It undertakes a comprehensive examination of the fields of management and policy making in shipping by bringing together chapters on key topics of seminal scientific and practical importance Within 21 original chapters authoritative experts describe and analyze concepts at the cutting edge of knowledge in shipping Themes include maritime management and policy ship finance port and maritime economics and maritime logistics A study examines the determinants of ship management fees Aspects of corporate governance in the shipping industry are reviewed and there is a critical review of the ship investment literature Other topics featured include the organization and management of tanker and dry bulk shipping companies environmental management in shipping with reference to energy efficient ship operation a study of the BIMCO Shipping KPI standard utilizing the Bunker Adjustment Factor as a strategic decision making instrument and slow steaming in the maritime industry All chapters are written to provide implications for further advancement in professional practice and research The Routledge Handbook of Maritime Management will be of great interest to relevant students researchers academics and professionals alike It provides abundant opportunities to guide further research in the areas covered but will also initiate and inspire effective maritime management
