Heavy Oils Production And Upgrading From Geology To Upgrading An Overview Ifp Publications:

Heavy Crude Oils Alain-Yves Huc, 2011 Heavy oils extra heavy oils and tar sands are major players for the future of energy They represent a massive world resource at least the size of conventional oils They are found all over the world but Canada and Venezuela together account by themselves for more than half of world deposits They share the same origin as the lighter conventional oils but their geological fate drove them into thick viscous tar like crude oils Most of them result from alteration processes mediated by microbial degradation They are characterized by a low content of lighter cuts and a high content of impurities such as sulfur and nitrogen compounds and metals so their production is difficult and deployment of specific processes is required in order to enhance their transportability and to upgrade them into valuable products meeting market needs and honouring environmental requirements Although these resources are increasingly becoming commercially producible less than 1% of total heavy crude oil deposits worldwide are under active development The voluntarily wide scope of this volume encompasses geology production transportation upgrading economics and environmental issues of heavy oils It does not pretend to be exhaustive but to provide an authoritative view of this very important energy resource

Topics on Oil and Gas Ali Ismet Kanlı, Tye Ching Thian, 2023-12-20 Reservoir characterization is the model that characterizes reservoirs based on their ability to store and produce hydrocarbons Reservoir modeling is the process of creating a three dimensional representation of a given reservoir based on its petrophysical geological and geophysical properties Reservoir engineering is the formulation of development and production plans that will result in maximum recovery for a given set of economic environmental and technical constraints It is not a one time activity but needs continual updating throughout the production life of a reservoir Reservoir management is often defined as the allocation of resources to optimize hydrocarbon recovery from a reservoir while minimizing capital investments and operating expenses The oil and gas industry is divided into upstream and downstream sectors In general the upstream sector involves activities carried out at a reservoir while the downstream sector involves all petroleum processing activities carried out in a refinery Petroleum processing engineering involves all downstream crude oil processing operations from crude oil as the feedstock to final products such as gasoline kerosene diesel gas oil and lubricating oil Petroleum processing technology continues to develop in consideration of all types of sustainability related challenges This book provides a comprehensive overview of the oil and gas industry presenting the most recent research in the field

Chemical Enhanced Oil Recovery Patrizio Raffa, Pablo Druetta, 2019-07-22

This book aims at presenting describing and summarizing the latest advances in polymer flooding regarding the chemical synthesis of the EOR agents and the numerical simulation of compositional models in porous media including a description of the possible applications of nanotechnology acting as a booster of traditional chemical EOR processes

A large part of the world economy depends nowadays on non renewable energy sources most of them of fossil origin

Though the search for and the development of newer greener and more sustainable sources have been going on for the last decades humanity is still fossil fuel dependent

Primary and secondary oil recovery techniques merely produce up to a half of the Original Oil In Place

Enhanced Oil Recovery EOR processes are aimed at further increasing this value

Among these chemical EOR techniques including polymer flooding present a great potential in low and medium viscosity oilfields

Describes recent advances in chemical enhanced oil recovery

Contains detailed description of polymer flooding and nanotechnology as promising boosting tools for EOR

Includes both experimental and theoretical studies

About the Authors Patrizio Raffa is Assistant Professor at the University of Groningen

He focuses on design and synthesis of new polymeric materials optimized for industrial applications such as EOR coatings and smart materials

He co authored about 40 articles in peer reviewed journals

Pablo Druetta works as lecturer at the University of Groningen RUG and as engineering consultant

He received his Ph D from RUG in 2018 and has been teaching at a graduate level for 15 years

His research focus lies on computational fluid dynamics CFD

Heavy Crude Oils Alain Yves Huc, 2011

Heavy and Extra-heavy Oil Upgrading Technologies James G. Speight, 2013-04-12
