

Hadoop interview questions and answers related to processing frameworks

Q Can you explain the differences between MapReduce and Apache Spark in terms of processing speed and ease of use?

MapReduce is a programming model used for processing large data sets with a distributed algorithm. It can be somewhat slower due to its batch processing nature and the need to write complex code for even simple tasks.

A Apache Spark, on the other hand, offers faster processing speeds and allows for real-time data processing. It is also easier to use because it provides high-level APIs in Java, Scala, Python, and R. This makes it more accessible for developers.

Ideal candidates should highlight the speed advantages of Spark and its real-time processing capabilities while acknowledging the robustness and reliability of MapReduce for certain types of batch processing.
