Abstract

The pacarana (*Dinomys branickii*) is among the rarest of mammals under human care, with few research about the species health. This study is aimed at describing for the first time values for pacaranas under human care for commonly used hematologic and blood chemistry parameters. After the physical restraint, animals were anesthetized with a combination of dexmedetomidine, midazolam, and butorphanol for preventive medical exams. Based on phylogenetic and morphological proximity, the data from the present study were compared with data from a worldwide zoological databank, Zoological Information Management System (ZIMS) for chinchillas (*Chinchilla lanigerus*), prehensile-tailed porcupines (*Coendou prehensilis*), and capybaras (*Hydrochoerus hydrochaeris*). For most of the hematological and biochemical values, pacaranas were similar to the data reported to prehensile-tailed porcupines. This information will be valuable for future initiatives to assess the health of individuals arriving in rehabilitation centers and kept in zoological institutions.

Introduction

The pacarana *Dinomys branickii* (Peters 1873) is a nocturnal rodent and the only extant representative of a once diverse caviomorph family, Dinomyidae, with males reaching 15 kg (White and Alberico 1992). Historically, the pacarana has been considered a rare species (Goeldi 1904; IUCN 2017), and as recently as the 1980s was first reported in Venezuela (Boher et al. 1988).

This species is known from the Merida Andes of north-western Venezuela, all three Andean cordilleras in Colombia, south along both Andean slopes of Ecuador, the eastern Andean slope and western Amazon Basin of Peru and Bolivia, and western Brazil (Patton et al. 2015). Although Dinomyidae is represented nowadays by a single species, the pacarana, this family was very diverse in the past, with about 20 genera and 40 extinct species in South America (Rinderknecht and Blanco 2008).

Dinomyids are monophyletic, but their relationship with other caviomorphs is controversial (Nasif and Abdala 2015), and the most recent phylogenetic studies using molecular data indicate a close relationship between the Dinomyidae and Chinchillidae (chinchillas and viscachas) (Voloach et al. 2013). A phylogenetic analysis based on morphological characters also indicates a sister group relationship between Dinomyidae and Erethizontidae (New World porcupines) (Nasif 2009a, 2009b).

The pacarana is among the rarest of mammals under human care, with few research dedicated to the species health. Approximately 36 pacaranas were held in zoos worldwide in 1984 (Meritt 1984); currently, there are just 12 individuals registered via ZIMS Species360 (Species and Holdings: ZIMS Species Holdings for *Dinomys branickii* 2024), a software used by zoological institutions worldwide.

The establishment of hematological and biochemical reference intervals (RI) is an important tool to assess the health of animals and understand the potential impact of disease on individuals and at population levels (Geffre et al. 2009; Friedrichs et al. 2012). Unlike for domestic animals and humans, estimating RI for free-ranging wildlife is challenging due to small numbers of individuals, limitations in accessing individuals for sampling, and constrained resources (Kelly et al. 2015).

Reintroduction Biology John G. Ewen, Doug P. Armstrong, Kevin A. Parker, Philip J. Seddon, 2012-01-30 This book aims to further advance the field of reintroduction biology beyond the considerable progress made since the formation of the IUCN SSC Reintroduction Specialist Group Using an issue based framework that purposely avoids a structure based on case studies the book's central theme is advocating a strategic approach to reintroduction where all actions are guided by explicit theoretical frameworks based on clearly defined objectives Issues covered include husbandry and intensive management monitoring and genetic and health management Although taxonomically neutral there is a recognised dominance of bird and mammal studies that reflects the published research in this field The structure and content are designed for use by people wanting to bridge the research management gap such as conservation managers wanting to expand their thinking about reintroduction related decisions or researchers who seek to make useful applied contributions to reintroduction Index
