Office of Experiment Stations, 1929 Political Ecologies of Cattle Ranching in Northern Mexico Eric P. Perramond, 2010-04-15 Private ranchers survived the Mexican Revolution and the era of agrarian reforms and they continue to play key roles in the ecology and economy of northern Mexico In this study of the Rio Sonora region of northern Mexico where ranchers own anywhere from several hundred to tens of thousands of acres Eric Perramond evaluates management techniques labor expenditures gender roles and decision making on private ranches of varying size By examining the economic and ecological dimensions of daily decisions made on and off the ranch he shows that contrary to prevailing notions ranchers rarely collude

as a class unless land titles are at issue and that their decision making is as varied as the landscapes they oversee Through first hand observation field measurements and intimate ethnographies Perramond sheds light on a complex set of decisions made avoided and confronted by these land managers and their families He particularly shows that ranching has endured because of its extended kinship network its reliance on all household members and its close ties to local politics Perramond follows ranchers caught between debt drought and declining returns to demonstrate the novel approaches they have developed to adapt to changing economies and ecologies alike such as strategically marketing the ranches for wild game hunting or establishing small businesses that subsidize their lifestyles and livelihoods Even more importantly he reveals the false dichotomy between private and communal ranching *Political Ecologies of Cattle Ranching in Northern Mexico* is essential reading for anyone interested in the future of ranching in western North America *Organic-Agriculture* Mr. Rohit Manglik,2023-06-23 Organic farming principles are covered Guides students to analyze sustainable practices fostering expertise in organic crop production through field applications and case studies **The Record Stockman ...
