Monitoring Ron Barron, Dr. Ron Barron, 1996 Maintenance can account for an extremely large proportion of the operating costs of machinery. Additionally, the downtime caused by machine breakdowns can severely affect the productivity of factories or the safety of products. Thus, it is becoming increasingly important for companies to consider the monitoring of their equipment in situ in order to reduce the number of breakdowns experienced and to avoid the unnecessary cost and delay caused by repairs. Engineering Condition Monitoring provides an overview of all aspects of this important technique, paying special attention to the vibration analysis of rotating machines. The text will be suitable for industrial practitioners and managers along with postgraduate students involved in mechanical and manufacturing engineering. The authors have used their vast collective experience both in industry and as academic teachers to produce a broad descriptive text concentrating on practical aspects that will be invaluable to anyone involved in the operation or sub-contracting of condition monitoring methods. **COMADEM 88**, 1988-06-30 *Journal of the Society of Environmental Engineers*, 1974 Fluid Machinery for the Oil, Petrochemical, and Related Industries, 1990. Proceedings of the Fourth European Congress provide an update on the design, operation and testing of fluid machinery. They examine the applications of turbocompressors in industry, the design and operation of turbomachinery, centrifugal pumps and advanced pumping developments. *Marine Technology and Transportation* T. Graczyk, 1995. Changes in international trade have had significant effects on the economics of marine transportation and will continue to do so into the 21st century. This is compounded by the role of technological change and these consequent uncertainties have necessitated a review of advances in marine transportation. Marine technology, particularly the area of ship design, building and operation, is experiencing rapid changes in a more competitive world market. For any industry to remain competitive, it is of the utmost importance that new technologies are not only developed but rapidly incorporated and put into use. **Proactive Condition Monitoring of Low-Speed Machines** Zhaklina Stamboliska, Eugeniusz Rusiński, Przemysław Moczko, 2014-11-15. This book broadens readers' understanding of proactive condition monitoring of low speed machines in heavy industries. It focuses on why low speed machines are different than others and how maintenance of these machines should be implemented with particular attention. The authors explain the best available monitoring techniques for various equipment and the principle of how to get proactive information from each technique. They further put forward possible strategies for application of FEM for detection of faults and technical assessment of machinery. Implementation phases are described and industrial case studies of proactive condition monitoring are included. *Proactive Condition Monitoring of Low Speed Machines* is an essential resource for engineers and technical managers across a range of industries as well as design engineers working in industrial product development.
