Carcano rifles have become popular collector favorites again. Recent imports and the availability of accurate information, however, and components have helped to make it more apparent. The first of the 4.3 mm military cartridges to appear near the end of the 19th century, the Carcano's history has been plagued by a good deal of negative press and criticism, mainly the result of misinformation and lack of understanding of the design.

The Carcano's action design is by no means weak, tests performed by J.D. Aubrey and several others were unable to cause action failure. However, surplus rifles should all be thoroughly inspected by a competent gunsmith before firing. Carcano rifles are built with a 20" bore and 26" grooves. This was done to extend barrel life. Derivatives, by virtue of this, not generally accurate with conventional 26" 4.3 mm bullets. Homely now produces a .267" 140 grain Bond Nose bullet designed specifically for Carcano rifles. We have achieved excellent accuracy with this bullet and the loads listed here, our best results came from H 414 and WIN 760.

Homely, Norma has been the only source for Boxer primed Carcano cartridge cases, these cases have an extractor groove that is too narrow and does not function properly in the stripper clip and goes with difficulty. Cases recently made available by Prvi Partizan have the proper groove dimension and functioned flawlessly in our test rifle.

Strictly do not deviate from the components or loads shown in the 4.3 mm bullet. Dangerously high pressures may result.
