as a function of its spatial wavelength. This transmission characteristic is produced by a Gaussian profile weighting function as defined in this Section. The equation is as follows:

$$\frac{\text{Filter Output}}{\text{Filter Input}} = e^{-\alpha(\lambda/\lambda_s)^2}$$

where $\alpha = \sqrt{[\ln(2)]/\pi} = 0.4697$ and λ_s is the roughness short-wavelength cutoff. Examples of the transmission characteristic for several values of λ_s (and also λ_c) are given in Fig. 9-2.

9-5.6 Weighting Function for the Roughness Short-Wavelength Cutoff. The weighting function of the Gaussian phase correct filter for the roughness short-wavelength cutoff has a Gaussian form, similar to that to be discussed in para. 9-5.7 and shown in Fig. 9-3. The equation for the weighting function $S(x)$ is as follows:

$$S(x) = (\alpha\lambda_s)^{-1} e^{-\alpha(x/\lambda_s)^2}$$

where x is the lateral position from the mean of the weighting function. The direct result of this filtering process is a smoothed profile, that is, one whose short wavelengths are attenuated.

9-5.7 Weighting Function for the Roughness Long-Wavelength Cutoff. The weighting function of the Gaussian phase correct filter for the roughness long-wavelength cutoff (Fig. 9-3) has a Gaussian form. With the long-wavelength cutoff λ_c , the equation is as follows:

$$S(x) = (\alpha\lambda_c)^{-1} e^{-\alpha(x/\lambda_c)^2}$$

In this case, the smoothed profile that results from applying the long-wavelength filter is the roughness mean line, and the roughness profile is found by subtracting this roughness mean line from the original measured profile.

9-5.8 Transmission Characteristic of the Gaussian-Filtered Waviness Profile (Roughness Mean Line). The transmission characteristic of the roughness mean line is determined from the weighting function $S(x)$ by means of the Fourier transform (see Section 1) and is given in Fig. 9-4. The transmission characteristic for the mean line has the following equation:

$$\frac{\text{Filter Output}}{\text{Filter Input}} = e^{-\alpha(\lambda/\lambda_s)^2}$$

9-5.9 Transmission Characteristic of the Gaussian-Filtered Roughness Profile. The transmission characteristic of the Gaussian filtered roughness profile (see Figs. 9-2 and 9-5) is the complement to the transmission characteristic of the roughness mean line, as defined in para. 9-5.8, because the roughness profile is the difference between the measured profile and the roughness mean line. The equation is therefore given by the following:

$$\frac{\text{Filter Output}}{\text{Filter Input}} = 1 - e^{-\alpha(\lambda/\lambda_s)^2}$$

9-5.10 Errors of Approximations to the Gaussian Filter. No tolerance values are given for Gaussian filters as they were for 2RC filters in para. 9-4.3. Instead, a

Characterisation of Areal Surface Texture Richard Leach, 2013-04-03 The function of a component part can be profoundly affected by its surface topography There are many examples in nature of surfaces that have a well controlled topography to affect their function Examples include the hydrophobic effect of the lotus leaf the reduction of fluid drag due to the riblet structure of shark skin the directional adhesion of the gecko foot and the angular sensitivity of the multi faceted fly eye Surface structuring is also being used extensively in modern manufacturing In this way many properties can be altered for example optical tribological biological and fluidic Previously single line profile measurements were adequate to control manufacture of surfaces but as the need to control the functionality of surfaces increases there is a growing need for three dimensional areal measurement and characterisation techniques For this reason there has been considerable research development and standardisation of areal techniques This book will present the areal framework that is being adopted by the international community Whereas previous books have concentrated on the measurement aspects this book concentrates on the characterisation techniques i e how to interpret the measurement data to give the appropriate functional information for a given task The first part of the book presents the characterisation methods and the second part case studies that highlight the use of areal methods in a broad range of subject areas from automobile manufacture to archaeology Contents
