

Assessing Students' Metacognitive Awareness of Reading Strategies

This article describes the development and validation of a new self-report instrument, the Metacognitive Awareness of Reading Strategies Inventory, which is designed to assess adolescent and adult readers' metacognitive awareness and perceived use of reading strategies while reading academic or school-related materials. There were 3 strategy subscales or factors: Global Reading Strategies, Problem-Solving Strategies, and Support Reading Strategies. The reliability and factorial validity of the scale were demonstrated. After a brief review of the literature, the development and validation of the instrument are described, and its psychometric properties are discussed. In addition, directions for administering and scoring the instrument are provided, and suggestions for interpreting the results obtained are offered. Finally, the scales' implications for reading research and instruction are discussed.

Recent trends within the domain of reading comprehension have led to an increasing emphasis on the role of metacognitive awareness of one's cognitive and motivational processes while reading (Alexander & Jetton, 2000; Guthrie & Wigfield, 1999; Pressley, 2000; Pressley & Afflerbach, 1995). Indeed, researchers agree that awareness and monitoring of one's comprehension processes are critically important aspects of skilled reading. Such awareness and monitoring processes are often referred to in the literature as *metacognition*, which can be thought of as the knowledge of the readers' cognition about reading and the self-control mechanisms they exercise when monitoring and regulating text comprehension.

The construct of metacognition has been richly built through the efforts of several prominent researchers representing diverse research traditions using various data sources. Although it is a challenge to account for all the characterizations of metacognition, we attempt, in our brief review, to reflect the richness of inquiry behind the construct, which provides a foundation for developing a valid and reliable instrument aimed at measuring readers' metacognitive awareness and control of the strategic processes invoked while reading. Researchers generally agree that *metacognition* refers to the "knowledge about cognitive states and abilities that can be shared among individuals while at the same time expanding the construct to include affective and motivational characteristics of thinking" (Paris & Winograd, 1990, p. 15). In his classic article "Metacognition and Cognitive Monitoring," Flavell (1979) described the process of cognitive monitoring as occurring through the actions and interactions of four classes or interrelated phenomena: Metacognitive knowledge, metacognitive experiences, goals (or tasks), and actions (or strategies). Other researchers (e.g., Wade, Trathen, & Schraw, 1990) have used examples of students' reflections about their thinking while reading to illustrate what they do when they read. Readers' reflections show how they plan, monitor, evaluate, and use information available to them as they

make sense of what they read. Such reflections unveil judgments about the readers' thinking processes that serve as conventional descriptions of metacognition. Recent conceptions of reading comprehension depict efficient readers as strategic or "constructively responsive" readers who carefully orchestrate cognitive resources when reading (Pressley & Afflerbach, 1995).

Researchers investigating reading comprehension monitoring among skilled and unskilled readers have long recognized the importance of metacognitive awareness in reading comprehension because it distinguishes between skilled and unskilled readers. Paris and Jacobs (1984) provided an illustration of the differences between these two types of readers:

Skilled readers often engage in deliberate activities that require planful thinking, flexible strategies, and periodic self-monitoring. They think about the topic, look forward and backward in the passage, and check their own understanding as they read. Beginning readers or poor readers do not recruit and use these skills. Indeed, novice readers often seem oblivious to these strategies and the need to use them. (p. 2083)

Skilled readers, according to Snow, Burns, and Griffin (1998), are good comprehenders. They differ from unskilled readers in "their use of general world knowledge to comprehend text literally as well as to draw valid inferences from texts, in their comprehension of words, and in their use of comprehension monitoring and repair strategies" (p. 62). Pressley and Afflerbach (1995) pointed out that skilled readers approach the reading task with some general tendencies. For example, they tend to be aware of what they are reading; they seem to know why they are reading; and they have a set of tentative plans or strategies for handling potential problems and for monitoring their comprehension of textual information.

Unskilled readers (typically young developing readers and some inexperienced adolescents and adults), on the other hand, are quite limited in their metacognitive knowledge about reading (Paris & Winograd, 1990). They do relatively little monitoring of their own memory, comprehension, and other cognitive tasks (Flavell, 1979; Markman, 1979) and tend to focus on reading as a decoding process rather than as a meaning-getting process (Baker & Brown, 1984). In addition, they are less likely than skilled readers to detect contradictions or resolve inconsistencies in understanding text
