The Report: Indonesia 2018 Oliver Cornock, 2018 In 2018 the Indonesian economy recorded a growth rate of 5.2% the highest in five years This was in spite of a slump in the rupiah and a trade imbalance and took place against a backdrop of rising US interest rates and deteriorating trade relations between the world's two biggest economies The country's emphasis on industrialisation and infrastructure development is laying the foundations for continued economic growth Moreover the archipelago's growing middle class population geographical position and human capital development agenda alongside progress in free trade agreements make it a strong contender on the global economic stage The country holds considerable potential for developing entrepreneurial and creative prowess already being home to four unicorn startups Investors have continued to look beyond traditional destinations with emerging cities like Surabaya and Palembang showing strong possibilities for economic growth Although the outcome of the April 2019 national election will determine the course of further infrastructure development and tax reforms the future looks promising with predictions of continued growth accompanied by stable inflation
