Post-Genomic Cardiology José Marín-García,2011-04-28 Recent advances in molecular and cellular biology have markedly changed our understanding of the heart and this is having tremendous ramifications for the clinician This unique reference offers a comprehensive and critical evaluation of this contribution in the field of cardiovascular molecular medicine providing

the reader with a sense of new directions in which molecular medicine might be applied It begins with a detailed primer that makes readily accessible recent molecular genetic and cellular techniques Rounding out the coverage of this exciting field are critical and comprehensive discussions on the use of molecular genetic and cellular techniques used to identify the etiology and pathophysiology of specific cardiac diseases Discusses diagnostic and therapeutic options available not only in the adult and aging individuals but also in infants children Numerous illustrations and flow charts Explains cutting edge molecular techniques including analysis of mitochondria their role in cardiac dysfunction and updated analysis of Cardioprotection and Metabolic Syndrome Presentation of recent translational studies for the treatment of cardiovascular diseases is included e g gene therapy pharmacological treatments and stem cell transplantation *Neuroinflammatory Mechanisms in Alzheimer's Disease* Joseph Rogers, 2013-03-11 Research into inflammatory mechanisms that may cause damage to the Alzheimer's disease AD brain has now been ongoing for nearly two decades Some two dozen clinical studies have strongly suggested that conventional anti inflammatory drugs may be useful to delay the onset or slow the progression of the disorder Moreover virtually all the major systems of the innate immune response appear to be present and most are upregulated in pathologically vulnerable regions of the AD brain These new findings are described in this volume first in overview form followed by chapters on topics of special interest In many ways to understand AD brain inflammation one need only review a text on peripheral inflammation biology leaving out the chapters on humoral mediators and substituting microglia for macrophages In several other key respects however AD brain inflammation is unique due primarily to idiosyncratic interactions of inflammatory mediators and mechanisms with classical AD pathology amyloid peptide A deposits and neurofibrillary tangles NFTs For this reason some key concepts about the inflammation that occurs in AD may warrant discussion in preparation for the more detailed chapters that follow
