Audit In An Age Of Intelligent Machines:

Wisdom in the Age of Intelligent Machines Edward H. Spence, 2025-07-22 This book offers an innovative approach to evaluating information and knowledge and its relation to the good life in the Age of Autonomous Intelligent Machines through the concept of Wisdom. Wisdom is understood as a type of meta information and meta knowledge which comprises epistemic, ethical and eudaimonic features and provides a direct conceptual and practical link between the concepts of information, intelligence, knowledge, the good life and wellbeing. More generally it provides a direct link between technology and in particular Information Communication Technology (ICT) and Artificial Intelligence (AI) technologies, the good life and wellbeing. As such the concept of wisdom allows for a direct normative evaluation of the impact the dissemination of information through ICTs and AI technologies have on the wellbeing of individuals and society at large. It provides a theoretical rationale to demonstrate the important and relevant role that wisdom plays in the specific evaluation of information in the digital and technological age in which we now live. To that end a methodological approach is used in this book to show how some different general types of practical manifestations of digital information and intelligence can be normatively evaluated if they are good or bad for us through the application of the concept of wisdom. Edward H. Spence draws from the Stoics to present a neo-Stoic account of wisdom which he then applies to the technologies in question.
