[Automotive Chassis Engineering](#) David C. Barton, John D. Fieldhouse, 2024-06-05 Written for students and practising engineers working in automotive engineering this book provides a fundamental yet comprehensive understanding of chassis systems and requires little prior knowledge on the part of the reader It presents the material in a practical and realistic manner using reverse engineering as a basis for examples to reinforce understanding of the topics The specifications and characteristics of vehicles currently on the market are used to exemplify the theory s application and care is taken to connect the various topics covered so as to clearly demonstrate their interrelationships This second edition is fully updated and revised throughout and includes a new chapter on vehicle deceleration behaviour The book opens with a chapter on basic vehicle mechanics which includes the forces acting on a vehicle in motion assuming a rigid body The new chapter on vehicle deceleration behaviour introduces the basic concepts of a conventional foundation braking system before considering means of optimising the deceleration performance of any wheel braked vehicle based on the tyre road adhesion characteristics The next chapter focuses on vehicle dynamics by considering suspension systems and how the important components of the system the tyres linkages springs dampers etc interact to give the required performance characteristics for the vehicle The book then proceeds to a chapter on steering systems which provides readers with a firm understanding of the principles and forces involved under static and dynamic loading The chapter on chassis structures and materials outlines analysis tools typically finite element analysis and design features that are used to reduce mass and increase occupant safety in modern vehicles The final chapter on noise

vibration and harshness NVH includes a basic overview of acoustic and vibration theory and makes use of extensive research investigations and practical experience as a means of addressing NVH issues. In all subject areas the authors take into account the latest trends anticipating the move towards electric vehicles on board diagnostic monitoring active systems and performance optimisation. The book features a number of worked examples and case studies based on recent research projects. All students including those on Master level degree courses in automotive engineering and professionals in industry who want to gain a better understanding of vehicle chassis engineering will benefit from this book.

Innovation in Manufacturing Networks. A fundamental concept of the emergent business scientific and technological paradigms: the area innovation, the ability to apply new ideas to products, processes, organizational practices and business models is crucial for the future competitiveness of organizations in a continually increasingly globalised knowledge intensive marketplace. Responsiveness, agility as well as the high performance of manufacturing systems is responsible for the recent changes in addition to the call for new approaches to achieve cost effective responsiveness at all the levels of an enterprise. Moreover, creating appropriate frameworks for exploring the most effective synergies between human potential and automated systems represents an enormous challenge in terms of processes, characterization, modelling and the development of adequate support tools. The implementation and use of Automation Systems requires an ever increasing knowledge of enabling technologies and Business Practices. Moreover, the digital and networked world will surely trigger new business practices. In this context and in order to achieve the desired effective and efficiency performance levels it is crucial to maintain a balance between both the technical aspects and the human and social aspects when developing and applying new innovations and innovative enabling technologies.
