An Exploration of Function Analysis and Function Allocation in the Commercial Flight Domain, 1991 The applicability is explored of functional analysis methods to support cockpit design Specifically alternative techniques are studied for ensuring an effective division of responsibility between the flight crew and automation A functional decomposition is performed of the commercial flight domain to provide the information necessary to support allocation decisions and demonstrate methodology for allocating functions to flight crew or to automation The function analysis employed bottom up and top down analyses and demonstrated the comparability of identified functions using the lift off segment of the take off phase as a test case The normal flight mission and selected contingencies were

addressed Two alternative methods for using the functional description in the allocation of functions between man and machine were investigated The two methods were compared in order to ascertain their relative strengths and weaknesses Finally conclusions were drawn regarding the practical utility of function analysis methods Safety Management Manual (SMM).
