Parsing with Perl 6 Regexes and Grammars Moritz Lenz, 2017-12-04 Write good regexes and parsers with the Perl 6 programming language You ll see how regexes are used for searching parsing and validation in particular the grammar extension makes them uniquely suitable for parsing the main focus of this book Written by Perl 6 expert Moritz Lenz a core contributor of Rakudo Parsing with Perl 6 Regexes and Grammars starts from the very basics of regular expressions and then explores how they integrate with regular Perl 6 code Then follows a deeper exploration of how regexes work under the hood and a discussion of common techniques for constructing regexes and exploring the data under scrutiny Later material goes beyond relatively simple formats to reusable named regexes and grammars which permit code reuse in grammars and shows how to write parsers for more involved data formats Error reporting and case studies wrap up the topic While regexes allow you to search for patterns in text and validate input Perl 6

regexes advance that concept you'll see how they are easier to read yet much more powerful than the traditional Perl compatible regular expression. With improved reusability and backtracking control you will be able to write complete parsers with the help of this book.

What You'll Learn Discover the building blocks of Perl 6 regexes. Handle regex mechanics and master useful regex techniques. Extract data and work with patterns among these use cases. Reuse named regexes and other grammars as components or templates. Write full parsers including advanced error reporting and data extraction. Learn how to parse nested scopes and indentation based formats.

Who This Book Is For Those with at least some prior experience with Perl programming but who may be new to Perl 6 as well as searching and parsing.

Making Presentation Math Computable André Greiner-Petter, 2022-12-31 This Open Access book addresses the issue of translating mathematical expressions from LaTeX to the syntax of Computer Algebra Systems CAS Over the past decades especially in the domain of Sciences Technology Engineering and Mathematics STEM LaTeX has become the de facto standard to typeset mathematical formulae in publications Since scientists are generally required to publish their work LaTeX has become an integral part of today's publishing workflow On the other hand modern research increasingly relies on CAS to simplify manipulate compute and visualize mathematics However existing LaTeX import functions in CAS are limited to simple arithmetic expressions and are therefore insufficient for most use cases Consequently the workflow of experimenting and publishing in the Sciences often includes time consuming and error prone manual conversions between presentational LaTeX and computational CAS formats To address the lack of a reliable and comprehensive translation tool between LaTeX and CAS this thesis makes the following three contributions First it provides an approach to semantically enhance LaTeX expressions with sufficient semantic information for translations into CAS syntaxes Second it demonstrates the first context aware LaTeX to CAS translation framework LaCAST Third the thesis provides a novel approach to evaluate the performance for LaTeX to CAS translations on large scaled datasets with an automatic verification of equations in digital mathematical libraries This is an open access book

Exploring Mathematics with Your Computer Arthur Engel, 2023-02-14 This is a mathematics book, not a programming book, although it explains Pascal to beginners. It is aimed at high school students and undergraduates with a strong interest in mathematics and teachers looking for fresh ideas. It is full of diverse mathematical ideas requiring little background. It includes a large number of challenging problems, many of which illustrate how numerical computation leads to conjectures which can then be proved by mathematical reasoning. It is assumed that readers have a PC at their disposal.

Data Structures and Algorithms Dr. Deepak Saxena, 2025-05-23 **Principles and Practice of Semantic Web Reasoning**

Francois Bry, Nicola Henze, Jan Maluszynski, 2003-11-20 The Semantic Web is a major endeavor aimed at enriching the existing Web with metadata and processing methods so as to provide Web based systems with advanced so called intelligent capabilities in particular with context awareness and decision support. The advanced capabilities striven for in most Semantic Web applications primarily call for reasoning. Reasoning capabilities are offered by existing Semantic Web languages such as BPEL4WS, BPML, ConsVisor, DAML, S-JTP, TRIPLE and others. These languages however were developed mostly from functionality centered e.g. ontology reasoning or access validation or application centered e.g. Web service retrieval and composition perspectives. A perspective centered on the reasoning techniques e.g. forward or backward chaining, tableau like methods, constraint reasoning etc. complementing the above mentioned activities appears desirable for Semantic Web systems and applications. The workshop on Principles and Practice of Semantic Web Reasoning which took place on December 8, 2003 in Mumbai, India, was the first of a series of scientific meetings devoted to such a perspective.

Just as the current Web is inherently heterogeneous in data formats and data semantics, the Semantic Web will be inherently heterogeneous in its reasoning forms. Indeed, any single form of reasoning turns out to be unrealistic in the Semantic Web. For example, ontology reasoning in general relies on monotonic negation for the metadata, often can be fully specified while databases. Web databases and Web based information systems call for non monotonic reasoning for one would not specify non existing trains in a railway timetable. Constraint reasoning is needed when dealing with time for time intervals have to be dealt with while forward and/or backward chaining is the reasoning of choice when coping with database like views for views i.e. virtual data can be derived from actual data using operations such as join and projections.
