

The kidneys and dialysis

LO: Why and how our body excretes waste substances

HOMEOSTASIS

- body uses so much things, because it must maintain a constant internal environment
- allows the body's cells to work at their optimum.

Waste removal

- renal system is important in removing waste from the body

Urea

Excess amino acids in the body are broken down by the liver producing waste $\rightarrow$ urea

important $\rightarrow$ converts toxic ammonia to urea

If conc. urea can start to denature enzymes $\therefore$ removed from the body
After produced urea is transported by the circulatory system to the kidneys

Kidney then filters the blood = removing urea and excess water and salt $\therefore$ forms urine
 $\rightarrow$ urine is stored in the bladder before being excreted from the body
