and health sciences *Biostatistics for the Biological and Health Sciences* Marc M. Triola, Jason Roy, 2019 *Statistics with Applications to the Biological and Health Sciences* M. Anthony Schork, Richard D. Remington, 2000

THE definitive basic book on applied biostatistical methods Particularly suited for readers with limited mathematical background it makes biostatistics accessible by using thorough intuitive explanations often laced with humor and described with an appeal to common sense logical notions and by focusing on selected statistical methods and procedures applicable to the biological biomedical and health sciences It discusses the concepts of the method the rationale of the method when to use the method and how to interpret the results The computations while included are not the focus of the presentation Several larger examples are used repeatedly from chapter to chapter to demonstrate how investigators develop and carry out a study by moving from problem statement to data accrual to computation of descriptive statistics to estimation and hypothesis testing including univariate bivariate and finally multivariable procedures for both discrete and continuous variables The book is not tied to any particular computer package e g SAS Systat BMDP however many prototype computerized outputs of statistical analyses are illustrated and discussed in detail with guidelines for reading and interpreting results

Descriptive Statistics Probability Populations Samples and Inference Some Important Distributions Estimation Hypothesis Testing Frequency Data The Analysis of Variance Simple Linear Regression and Correlation Multiple Regression Logistic Regression Repeated Measures and Longitudinal Studies Distribution Free and Nonparametric Methods Demography and Vital Statistics
