Tanenbaum,Maarten van Steen,2007 No further information has been provided for this title *Distributed Network Systems* Weijia Jia,Wanlei Zhou,2004-12-15 Both authors have taught the course of Distributed Systems for many years in the respective schools During the teaching we feel strongly that Distributed systems have evolved from traditional LAN based distributed systems towards Internet based systems Although there exist many excellent textbooks on this topic because of the fast development of distributed systems and network programming protocols we have difficulty in finding an appropriate textbook for the course of distributed systems with orientation to the requirement of the undergraduate level study for today s distributed technology Specifically from to date concepts algorithms and models to implementations for both distributed system designs and application programming Thus the philosophy behind this book is to integrate the concepts algorithm designs and implementations of distributed systems based on network programming After using several materials of other textbooks and research books we found that many texts treat the distributed systems with separation of concepts algorithm design and network programming and it is very difficult for students to map the concepts of distributed systems to the

algorithm design prototyping and implementations This book intends to enable readers especially postgraduates and senior undergraduate level to study up to date concepts algorithms and network programming skills for building modern distributed systems It enables students not only to master the concepts of distributed network system but also to readily use the material introduced into implementation practices

Fleischmann, 2012-12-06 The purpose of this book is to make the reader familiar with software engineering for distributed systems Software engineering is a valuable discipline in the development of software The reader has surely heard of software systems completed months or years later than scheduled with huge cost overruns systems which on completion did not provide the performance promised and systems so catastrophic that they had to be abandoned without ever doing any useful work Software engineering is the discipline of creating and maintaining software when used in conjunction with more general methods for effective management its use does reduce the incidence of horrors mentioned above The book gives a good impression of software engineering particularly for distributed systems It emphasises the relationship between software life cycles methods tools and project management and how these constitute the framework of an open software engineering environment especially in the development of distributed software systems There is no closed software engineering environment which can encompass the full range of software missions just as no single flight plan airplane or pilot can perform all aviation missions There are some common activities in software engineering which must be addressed independent of the applied life cycle or methodology Different life cycles methods related tools and project management approaches should fit in such a software engineering framework *Concepts for Distributed Systems Design* G. von
