*Discrete Mathematical Structures for Computer Science* Bernard Kolman, Robert C. Busby, 1987 This text has been designed as a complete introduction to discrete mathematics primarily for computer science majors in either a one or two semester course The topics addressed are of genuine use in computer science and are presented in a logically coherent fashion The material has been organized and interrelated to minimize the mass of definitions and the abstraction of some of the theory For

example relations and directed graphs are treated as two aspects of the same mathematical idea Whenever possible each new idea uses previously encountered material and then developed in such a way that it simplifies the more complex ideas that follow

C. Busby,Sharon Cutler Ross,2018 *Geometric Algebra Applications Vol. I* Eduardo Bayro-Corrochano,2018-06-20 The goal

of the Volume I Geometric Algebra for Computer Vision Graphics and Neural Computing is to present a unified mathematical treatment of diverse problems in the general domain of artificial intelligence and associated fields using Clifford or geometric

algebra Geometric algebra provides a rich and general mathematical framework for Geometric Cybernetics in order to

develop solutions concepts and computer algorithms without losing geometric insight of the problem in question Current

mathematical subjects can be treated in an unified manner without abandoning the mathematical system of geometric

algebra for instance multilinear algebra projective and affine geometry calculus on manifolds Riemann geometry the

representation of Lie algebras and Lie groups using bivector algebras and conformal geometry By treating a wide spectrum

of problems in a common language this Volume I offers both new insights and new solutions that should be useful to

scientists and engineers working in different areas related with the development and building of intelligent machines Each

chapter is written in accessible terms accompanied by numerous examples figures and a complementary appendix on Clifford

algebras all to clarify the theory and the crucial aspects of the application of geometric algebra to problems in graphics

engineering image processing pattern recognition computer vision machine learning neural computing and cognitive systems
