Doxiadis Architectural Space In Ancient Greece:

Architectural Space in Ancient Greece Constantinos Apostolou Doxiadis, Kōnstantinos A. Doxiadēs, 1972-01 Doxiadis is best known as an architect planner as a consultant with an international clientele as something of a prophet whose outlook is focused on man's worldwide future But here in his first major study originally published in German in 1937 Doxiadis looks back into the past to the architectural roots of his native Greece He works out a theory that accounts for the seemingly unordered layout of the buildings in ancient Greek sacred precincts proposing that the spatial relationships between the buildings were strictly determined according to a plan Doxiadis examines in detail nearly thirty sites charts their layouts and presents relevant linear and angular measurements Numerous site plans and about forty halftones complement the text The full references include many recent sources The trim size of the book itself is proportioned by means of the golden section

Doxiadis, 1978 **From Doxiadis' Theory to Pikionis' Work** Kostas Tsiambaos, 2017-09-22 In this book Tsiambaos redefines the ground breaking theory of Greek architect and town planner Constantinos A Doxiadis The Form of Space in Ancient Greece and moves his thesis away from antiquity and ancient architecture instead arguing that it can only be understood as a theory founded in modernity In light of this the author explores Doxiadis theory in relation to the work of the controversial Greek architect Dimitris Pikionis This parallel investigation of the philosophical content of Doxiadis theory and the design principles of Pikionis work establishes a new frame of reference and creates a valuable and original interpretation of their work Using innovative cross disciplinary tools and methods which expand the historical boundaries of interwar modernism the book restructures the ground of an alternative modernity that looks towards the future through a mirror that reflects the ancient past From Doxiadis Theory to Pikionis Work Reflections of Antiquity in Modern Architecture is fascinating reading for all scholars and students with an interest in modernism and antiquity the history and theory of architecture the history of ideas and aesthetics or town planning theory and design **Architecture and Mathematics from Antiquity to the Future** Kim Williams, Michael J. Studies in Hellenistic Architecture Frederick E. Winter, Janos Fedak, 2006-01-01 Studies in Hellenistic Architecture is a detailed analysis of the development of the major building types of the Hellenistic age the mid fourth century B C to the time of the Roman conquest of the Eastern Mediterranean In this meticulous work Frederick E Winter reveals how the architects of the period went beyond anything achieved by their Classical Greek predecessors and how these impressive skills prepared the way for many of Rome s later architectural achievements Geographically the monuments included in this volume extend from Spain to Afghanistan and from Provence to North Africa Winter discusses the architectural achievements of the various regional styles of the Eastern Mediterranean and takes a detailed look at Hellenistic developments west of the Adriatic While the interrelationship of these regional developments is often unclear especially in cases where there are no explicit criteria for dating Winter makes excellent use of the advance in scholarship over the past fifty to sixty years offering the first real attempt at a synthesis of this vast subject Studies in Hellenistic Architecture is an invaluable resource containing a wealth of illustrations of the various types of Hellenistic building and the most comprehensive scholarship to date on the topic

Space Structures A. Loeb, 2012-12-06 xiv aggregates this touches on the very nature of things The concept of statistical symmetry which Loeb develops is particularly important it emphasizes the limitations in seemingly random aggregates and for permits general statements of which the crystallographer s sym metries are only special cases The reductionist and holistic approaches to the world have been at war with each other since the times of the Greek philosophers and before In nature parts clearly do fit together into real structures and the parts are affected by their environment The problem is one of understanding The mystery that remains lies largely in the nature of structural hierarchy for the human mind can examine nature on many different scales sequentially but not simultaneously Arthur Loeb s monograph is a fundamental one but one can sense a devel opment from the relations between his zero and three dimensional cells to the far more complex world of organisms and concepts It is structure that makes the difference between

a cornfield and a cake between an aggregate of cells and a human being between a random group of human beings and a society We can perceive anything only when we perceive its structure and we think by structural analogy and comparison Several books have been published showing the beauty of form in nature This one has the beauty of a work of art but it grows out of rigorous mathematics and from the simplest of bases dimensional ity extent and valency *The Place of the Viewer* Kerr Houston,2019-05-07 In recent decades art historians and critics have occasionally emphasized a dynamic embodied mode of looking accenting the role of the viewer and the complex interplay between beholders and works of art In *The Place of the Viewer* Kerr Houston shows that an attention to the position and physical experiences of beholders has in fact long informed art historical analyses and that close study of the theme can lead to a fuller understanding of the discipline the act of viewership and individual works of art Simultaneously attentive to historical ideas and contemporary scholarship this book identifies a vein of thought that has been generally overlooked and proposes new ways of seeing familiar works and traditions *How it all Began (Routledge Revivals)* W.
