Dynamic Response of Linear Mechanical Systems Jorge Angeles, 2011-09-15 Dynamic Response of Linear Mechanical Systems Modeling Analysis and Simulation can be utilized for a variety of courses including junior and senior level vibration and linear mechanical analysis courses The author connects by means of a rigorous yet intuitive approach the theory of vibration with the more general theory of systems The book features A seven step modeling technique that helps structure the rather unstructured process of mechanical system modeling A system theoretic approach to deriving the time response of the linear mathematical models of mechanical systems The modal analysis and the time response of two degree of freedom systems the first step on the long way to the more elaborate study of multi degree of freedom systems using the Mohr circle Simple yet powerful simulation algorithms that exploit the linearity of the system for both single and multi degree of freedom systems Examples and exercises that rely on modern computational toolboxes for both numerical and symbolic computations as well as a Solutions Manual for instructors with complete solutions of a sample of end of chapter exercises Chapters 3 and 7 on simulation include in each Exercises section a set of miniprojects that require code writing to implement the algorithms developed in these chapters
