

THUMB RULE FOR CIVIL ENGINEERS

Thumb rule for estimating the Concrete Volume with respect to the area:

The volume of concrete required = $0.038 \text{ m}^3/\text{square foot area}$
Example:-If Plan Area = $40 \times 20 = 800 \text{ Sq. m.}$ So, for the plan area of 800 Sq. m. the area the total volume of concrete required = $800 \times 0.038 \text{ m}^3 = 30.4 \text{ m}^3$

Thumb rule for Steel quantity required for Slab, Beams, Footings & Columns:

Steel required in residential buildings = $4.5 \text{ Kgs} - 4.75 \text{ Kgs} / \text{Sq. Ft.}$
Steel required For Commercial buildings = $5.0 \text{ Kgs} - 5.50 \text{ Kgs/Sq. Ft.}$

Thumb Rules For Civil Engineers to estimate the Shuttering area:

Shuttering costs is taken as 15-18% of the total construction of the building. Shuttering work is done to bring the concrete in Shape. Thumb rule to estimate the shuttering required is 6 times the quantity of concrete or 2.4 times of Plinth area.

The following recommendations Thumb Rules For Civil Engineers are given in B N Datta for the Steel quantity used in different members of the building
Percentage of Steel in Structural Members:

- 1) Slab – 1% of the total volume of concrete
- 2) Beam – 2% of the total volume of concrete
- 3) Column – 2.5% of total volume of concrete
- 4) Footings – 0.8% of the total volume of concrete

Civil Engineering Structural Design Thumb Rules:

Structural and Civil Engineering Design William Addis, 2016-12-05 The importance of design has often been neglected in studies considering the history of structural and civil engineering Yet design is a key aspect of all building and engineering work This volume brings together a range of articles which focus on the role of design in engineering It opens by considering the principles of design then deals with the application of these to particular subjects including bridges canals dams and buildings from Gothic cathedrals to Victorian mills constructed using masonry timber cast and wrought iron Structural Engineering Design Calculations and Rules of Thumb Ruwan Abey Rajapakse, 2016-06-01 *Structural Engineering Design Calculations and Rules of Thumb* *Construction Engineering Design Calculations and Rules of Thumb* Ruwan Abey Rajapakse, 2016-09-02 *Construction Engineering Design Calculations and Rules of Thumb* begins with a brief but rigorous introduction to the mathematics behind the equations that is followed by self contained chapters concerning applications for all aspects of construction engineering Design examples with step by step solutions along with a generous amount of tables schematics and calculations are provided to facilitate more accurate solutions through all phases of a project from planning through construction and completion Includes easy to read and understand tables schematics and calculations Presents examples with step by step calculations in both US and SI metric units Provides users with an illustrated easy to understand approach to equations and calculation methods *Structural Design in Wood* Judith Stalnaker, Ernest Harris, 2014-07-08 The prime purpose of this book is to serve as a design is of considerable value in helping the classroom text for the engineering or architect student make the transition from the often sim ture student It will however also be useful to plastic classroom exercises to problems of the designers who are already familiar with design real world Problems for solution by the student in other materials steel concrete masonry but follow the same idea The first problems in each need to strengthen refresh or update their capa subject are the usual textbook type problems bility to do structural design in wood Design but in most chapters these are followed by prob principles for various structural materials are lems requiring the student to make structural similar but there are significant differences planning decisions as well The student may be This book shows what they are required given a load source to find the magni The book has features that the authors believe tude of the applied loads and decide upon a set it apart from other books on wood structural grade of wood Given a floor plan the student design One of these is an abundance of solved may be required to determine a layout of struc examples Another is its treatment of loads This tural members The authors have used most of book will show how actual member loads are the problems in their classes so the problems computed The authors have found that students have been tested *Structural Steel Design* Abi Aghayere, 2025-05-29 Essential knowledge of steel framed structure design is a cornerstone for architectural civil and structural engineers as well as for students planning careers in structural design and construction *Structural Steel Design* Fourth Edition delivers a comprehensive understanding of structural steel design starting with the fundamentals and

progressing to the design of a complete structural system It emphasizes not just the individual steel elements or components but their integration within the broader context of the entire structure By working through the chapters and corresponding design project tasks readers will complete the design of a full steel structure allowing them to grasp the connections between discrete components and the larger system This approach reinforces the importance of seeing the big picture in structural design Encouraged by the American Institute for Steel Construction this book goes beyond traditional textbook exercises by offering real world examples project based exercises and open ended problems that challenge the reader to make decisions and navigate the iterative nature of structural design Practical details and real world end of chapter problems reflect the types of challenges encountered in professional engineering practice making this text not just an academic resource but a practical guide for aspiring engineers

Structural Steel Design Abieyuwa Aghayere, Jason Vigil, 2020-02-06 This simple practical and concise guide to structural steel design using the Load and Resistance Factor Design LRFD and the Allowable Strength Design ASD methods will equip the reader with the necessary skills for designing real world structures Following a holistic project based learning approach that bridges the gap between engineering education and professional practice the design of each building component is presented in a way such that the reader can see how each element fits into the entire building design and construction process Structural details and practical example exercises that realistically mirror what obtains in professional design practice are presented
