Tirr , 1993-06-30 Writing a comprehensive book on satellite communications requires the command of many technical disciplines and the availability of up to date information on international recommendations system architectures and equipment standards It is therefore necessary to involve many authors each possessing a good level of knowledge in a particular discipline The problem of using a coherent and unambiguous set of definitions and basic terms has been solved by including in the book all the background information needed for understanding satellite communication systems without any major reference to other textbooks specializing in particular disciplines The obvious consequence of this approach has been the large size of the book with the advantages however of practically complete independence from other books more systematic discussion of the subject matter and better readability After the required background information emphasis has been placed on the discussion of techniques and system design criteria rather than on specific equipment implementation or description of particular systems The book may be divided in five parts as follows The first five chapters provide most of the required background information Chapter 6 is an introductory outline of satellite communication systems Chapters 7 to 13 deal with the various aspects of technical system design Chapter 14 discusses system economics Chapter 15 provides a brief insight into some foreseeable future developments of satellite communications Communications, Signal Processing, and Systems Qilian Liang, Wei Wang, Xin Liu, Zhenyu Na, Xiaoxia Li, Baoju Zhang, 2021-06-07 This book brings together papers presented at the 2020 International Conference on Communications Signal Processing and Systems which provides a venue

to disseminate the latest developments and to discuss the interactions and links between these multidisciplinary fields Spanning topics ranging from communications signal processing and systems this book is aimed at undergraduate and graduate students in Electrical Engineering Computer Science and Mathematics researchers and engineers from academia and industry as well as government employees such as NSF DOD and DOE Communications, Signal Processing, and Systems Wei Wang,Xin Liu,Zhenyu Na,Baoju Zhang,2024-02-29 This book brings together papers presented at the 2023 International Conference on Communications Signal Processing and Systems which provides a venue to disseminate the latest developments and to discuss the interactions and links between these multidisciplinary fields Spanning topics ranging from Communications Signal Processing and Systems this book is aimed at undergraduate and graduate students in Electrical Engineering Computer Science and Mathematics researchers and engineers from academia and industry as well as government employees such as NSF DOD DOE Satellite Communications Systems Engineering Louis Joseph Ippolito (Jr.),2017 **Satellite Communications Payload and System** Teresa M. Braun,2012-09-04 This is the first book primarily about the satellite payload of satellite communications systems It represents a unique combination of practical systems engineering and communications theory It tells about the satellites in geostationary and low earth orbits today both the so called bent pipe payloads and the processing payloads The on orbit environment mitigated by the spacecraft bus is described The payload units e g antennas and amplifiers as well as payload integration elements e g waveguide and switches are discussed in regard to how they work what they do to the signal their technology environment sensitivity and specifications At a higher level are discussions on the payload as an entity architecture including redundancy specifications what they mean how they relate to unit specifications and how to verify and specification compliance analysis budgets with uncertainty Aspects of probability theory handy for calculating and using uncertainty and variation are presented The highest level discussions on the end to end communications system start with a practical introduction to physical layer communications theory Atmospheric effects and interference on the communications link are described A chapter gives an example of optimizing a multibeam payload via probabilistic analysis Finally practical tips on system simulation and emulation are provided The carrier frequencies treated are 1 GHz and above Familiarity with Fourier analysis will enhance understanding of some topics References are provided throughout the book for readers who want to dig deeper Payload systems engineers payload proposal writers satellite communications systems designers and analysts and satellite customers will find that the book cuts their learning time Spacecraft bus systems engineers payload unit engineers and spacecraft operators will gain insight into the overall system Students in systems engineering microwave engineering communications theory probability theory and communications simulation and modelling will find examples to supplement theoretical texts Commercial Space Technologies and Applications: Communication, Remote Sensing, GPS, and Meteorological Satellites, Second Edition Mohammad Razani,2018-09-03 This new edition introduces and examines the space technologies that benefit our everyday
