The Congress and Exhibition Series **Arsenic in the Environment** offers an international multi and interdisciplinary discussion platform for research and innovation aimed towards a holistic solution to the challenges posed by the environmental toxin arsenic with global societal impact. The Congress has focused on cutting edge and breakthrough research in physical chemical toxicological medical agricultural and other specific issues on arsenic across a broader environmental realm. The Biennial Congress and Exhibition **Arsenic in the Environment** was first organized in Mexico City As2006 followed by As2008 in Valencia Spain As2010 in Tainan Chinese Taiwan As2012 in Cairns Australia As2014 in Buenos Aires Argentina As2016 in Stockholm Sweden and As2018 in Beijing P R China. The 8th International Congress As2020 was held June 7-9 2021 first time digitally owing to the global COVID 19 pandemic in Wageningen The Netherlands and with a title **Arsenic in the Environment Bridging Science to Practice for Sustainable Development**. The Congress addressed the broader context of arsenic research aligned on the following themes: Theme 1 Arsenic in Natural Soil and Water Systems Theme 2 Arsenic in Agriculture and Food Production Theme 3 Health Impacts of Arsenic Theme 4 Technologies for Arsenic Removal from Water Theme 5 Sustainable Mitigation and Management for Sustainable Development Arsenic in drinking

water and food is a major health issue affecting millions of people in many parts of the world. In recent years, serious cases of arsenic exposure through different environmental matrices have been reported from, for example, Argentina, Bangladesh, Chile, China, Taiwan, Turkey, India, Mexico, UK, USA, Pakistan, Vietnam, as well as other regions in the world. Arsenic can cause a number of carcinogenic and non-carcinogenic adverse effects on human health, and therefore human exposure to arsenic should be avoided. Notably, The Netherlands has been in the forefront of research on arsenic removal technology and developed a cutting edge innovation to remove arsenic to levels below the WHO drinking water guideline to as low as less than 1 g/L. This has created an enabling environment to discuss on policy issues for defining the new drinking water guideline. The Congress has attracted professionals involved in different segments of interdisciplinary research on arsenic in an open forum and strengthened relations between academia, research institutions, government and non-governmental agencies, industries and civil society organizations to share an optimal ambience for exchange of knowledge.

Mechanisms of Arsenic Toxicity and Tolerance in Plants Mirza Hasanuzzaman, Kamrun Nahar, Masayuki Fujita, 2018-11-19. Arsenic is likely the most talked about metalloid in the modern world because of its toxic effects on both animal and plants. Further, arsenic pollution is now producing negative impacts on food security, especially in many South Asian countries. Since plants are a major food source, their adaptation to As-rich environments is essential, as is being informed about recent findings on multifarious aspects of the mechanisms of arsenic toxicity and tolerance in plants. Although numerous research works and review articles have been published in journals, annual reviews and as book chapters to date, there has been no comprehensive book on this topic. This book contains 19 informative chapters on arsenic chemistry, plant uptake, toxicity and tolerance mechanisms, as well as approaches to mitigation. Readers will be introduced to the latest findings on plant responses to arsenic toxicity, various tolerance mechanisms and remediation techniques. As such, the book offers a timely and valuable resource for a broad audience, including plant scientists, soil scientists, environmental scientists, agronomists, botanists and molecular biologists.

Climate-Resilient Agriculture, Vol 2 Mirza Hasanuzzaman, 2023-11-09. Under ongoing climate change, natural and cultivated habitats of major food crops are being continuously disturbed. Such condition accelerates to impose stress effects like abiotic and biotic stressors. Drought, salinity, flood, cold, heat, heavy metals, metalloids, oxidants, irradiation etc. are important abiotic stresses and diseases and infections caused by plant pathogens viz. fungal agents, bacteria and viruses are major biotic stresses. As a result, these harsh environments affect crop productivity and its biology in multiple complex paradigms. As stresses become the limiting factors for agricultural productivity and exert detrimental role on growth and yield of the crops, scientists and researchers are challenged to maintain global food security for a rising world population. This two-volume work highlights the fast-moving agricultural research on crop improvement through the stress mitigation strategies with specific focuses on crop biology and their response to climatic instabilities. Together with Climate Resilient Agriculture Vol 1: Crop Responses and Agroecological Perspectives, it covers a wide range of
