Handbook of Nature-Based Solutions to Mitigation and Adaptation to Climate Change Gustavo J. Nagy, Desalegn Yayeh Ayal, 2025-11-04 Over recent years nature based solutions NbS have gained popularity as tools to ameliorate the effects of climate change while slowing down the global warming process More specifically the potential of NbS has been explored in terms of meeting greenhouse gas emissions targets and fostering climate change adaptation NbS are methods that use and enhance nature to improve social and environmental challenges They involve several multifaceted actions that work sustainably to restore and protect the natural environment while helping people Therefore these solutions are useful in climate change adaptation and mitigation There are 3 main areas which NbS may target namely reducing exposure reducing sensitivity and supporting adaptive capacity Reducing exposure refers to protecting areas from existing climate change effects There is thus a perceived need to document and promote experiences related to NbS and to apply these in different contexts It is against this background that the Handbook of Nature Based Solutions to Mitigation and Adaptation to Climate Change is being produced The publication will showcase experiences related to NbS from around the world In particular it will gather examples of projects studies and the latest thinking on NbS which can serve the purpose of inspiring and fostering further works in this key area Thanks to its scope and thematic diversity the book will be of special interest to representatives from government organisations researchers and students from a wide range of natural and social sciences courses It will also provide useful information to practitioners and representatives from non governmental organisations

Computational and Analytic Methods in Biological Sciences Akshara Makrariya, Brajesh Kumar Jha, Rabia Musheer, Anant Kant Shukla, Amrita Jha, Parvaiz Ahmad Naik, 2023-05-31 Despite major advances in healthcare over the past century the successful treatment of cancer has remained a significant challenge and cancers are the second leading cause of death worldwide behind cardiovascular disease Early detection and survival are important issues to control cancer The development of quantitative methods and computer technology has facilitated the formation of new models in medical and biological sciences The application of mathematical modelling in solving many real world problems in medicine and biology has yielded fruitful results In spite of advancements in instrumentations technology and biomedical equipment it is not always possible to perform experiments in medicine and biology for various reasons Thus mathematical modelling and simulation are viewed as viable alternatives in such situations and are discussed in this book The conventional diagnostic techniques of cancer are not always effective as they rely on the physical and morphological appearance of the tumour Early stage prediction and diagnosis is very difficult with conventional techniques It is well known that cancers are involved in genome level changes As of now the prognosis of various types of cancer depends upon findings related to the data generated through different experiments Several machine learning techniques exist in analysing the data of expressed genes however the recent results related with deep learning algorithms are more accurate and accommodative as they are effective in selecting and classifying informative genes This book explores the probabilistic computational deep learning model for cancer classification and prediction

Environmental Sci 10e Im/Tb Miller, 2003-10 *Biology of Sharks and*

Their Relatives Jeffrey C. Carrier, Colin A. Simpfendorfer, Michael R. Heithaus, Kara E. Yopak, 2022-06-08 Biology of Sharks and Their Relatives is an award winning and groundbreaking exploration of the fundamental elements of the taxonomy systematics physiology and ecology of sharks skates rays and chimera This edition presents current research as well as traditional models to provide future researchers with solid historical foundations in shark research as well as presenting current trends from which to develop new frontiers in their own work Traditional areas of study such as age and growth reproduction taxonomy and systematics sensory biology and ecology are updated with contemporary research that incorporates emerging techniques including molecular genetics exploratory techniques in artificial insemination and the rapidly expanding fields of satellite tracking remote sensing accelerometry and imaging With two new editors and 90 contributors from the US UK South Africa Portugal France Canada New Zealand Australia India Palau United Arab Emirates Micronesia Sweden Argentina Indonesia Cameroon and the Netherlands this third edition is the most global and comprehensive yet It adds six new chapters representing extensive studies of health stress disease and pathology and social structure and continues to explore elasmobranch ecological roles and interactions with their habitats The book concludes with a comprehensive review of conservation policies management and strategies as well as consideration of the potential effects of impending climate change Presenting cohesive and integrated coverage of key topics and discussing technological advances used in modern shark research this revised edition offers a well rounded picture for students and researchers

Water Chemistry Patrick L. Brezonik,William A. Arnold,2022-06-15 *Water Chemistry* provides students with the tools needed to understand the processes that control the chemical species present in waters of both natural and engineered systems After providing basic information about water and its chemical composition in environmental systems the text covers theoretical concepts key to solving water chemistry problems *Water Chemistry* emphasizes that both equilibrium and kinetic processes are important in aquatic systems The content focuses not only on inorganic constituents but also on natural and anthropogenic organic chemicals in water This new edition of *Water Chemistry* also features updated discussions of photochemistry chlorine and disinfectants geochemical controls on chemical composition trace metals nutrients and oxygen Quantitative equilibrium and kinetic problems related to acid base chemistry complexation solubility oxidation reduction reactions sorption and the fate and reactions of organic chemicals are solved using mathematical graphical and computational tools Examples show the application of theory and demonstrate how to solve problems using algebraic graphical and up to date computer based techniques Additional web material provides advanced content **Cumulated Index Medicus** ,1991 **Approaches to Understanding the Cumulative Effects of Stressors on Marine Mammals**

National Academies of Sciences, Engineering, and Medicine,Division on Earth and Life Studies,Ocean Studies Board,Committee on the Assessment of the Cumulative Effects of Anthropogenic Stressors on Marine Mammals,2017-06-04 Marine mammals face a large array of stressors including loss of habitat chemical and noise pollution and bycatch in fishing which alone kills hundreds of thousands of marine mammals per year globally To discern the factors contributing to population trends scientists must consider the full complement of threats faced by marine mammals Once populations or

ecosystems are found to be at risk of adverse impacts it is critical to decide which combination of stressors to reduce to bring the population or ecosystem into a more favorable state Assessing all stressors facing a marine mammal population also provides the environmental context for evaluating whether an additional activity could threaten it Approaches to Understanding the Cumulative Effects of Stressors on Marine Mammals builds upon previous reports to assess current methodologies used for evaluating cumulative effects and identify new approaches that could improve these assessments This review focuses on ways to quantify exposure related changes in the behavior health or body condition of individual marine mammals and makes recommendations for future research initiatives

Fungal Biotechnology Arshad Farid, Gagan Preet, 2025-09-11 This book presents diverse applications of fungi in medical pharmaceutical and environmental sciences It discusses the intricate processes involved in fungal metabolite production bioactive compound discovery and genetic engineering highlighting their critical roles in addressing global challenges such as chronic diseases drug development and environmental sustainability This book examines the growing importance of fungi in the biopharmaceutical industry including their use in immunotherapy vaccine development and precision medicine while also exploring the novel applications of fungal nanobiotechnology in drug delivery systems The chapters explore challenges in antifungal drug development and food safety particularly regarding mycotoxins and offer practical insights into diagnostic techniques for fungal infections This book also addresses the global regulatory standards for fungal products and the ethical considerations surrounding the advancement of fungal biotechnology
