Laws of Human Behavior Donald Pfaff, Sandra Sherman, 2025-03-04 How scientific studies of human behavior can be replicated with the consistency and rigor characteristic of the physical sciences yielding scientific laws In Laws of Human Behavior Donald Pfaff and Sandra Sherman argue that many behavioral and neural discoveries verified over the years through precise reliable measurement are tantamount to laws comparable in rigor and replicability to physical laws such as gravity and the second law of thermodynamics Drawing on research in areas including psychophysics various types of conditioning and habit formation and even social behaviors they show how important aspects of the behavioral sciences contribute to laws that should be celebrated now Responding to what some commentators have called a crisis in reliability the authors make a compelling case for the progress that experimental work in areas formerly labeled as soft science has achieved The book is international in scope References range from the early nineteenth century work of Weber to papers published in 2023 In particular the authors cite important accomplishments in the behavioral and neural sciences of the past few decades that support the characterization of these sciences as exact Each chapter of the book has three parts examples of the law's manifestations in everyday life examples of the laboratory science that supports the law and neurobiological results that further support the validity of the law The book also offers clues for understanding where the field of behavioral science is headed The authors intend for the book to be accessible to interested nonscientists

Lighting for Driving: Roads, Vehicles, Signs, and Signals, Second Edition Peter Boyce, 2024-09-04 Vehicle road sign and signal lighting are provided to enable drivers to reach their destinations quickly and safely However the attention given to how these forms of lighting function is likely to change as new technology is introduced and understanding of ergonomics and human factors improves Lighting for Driving Roads Vehicle Signs and Signals Second Edition shows the crucial role lighting plays in road safety and examines how it could be used more effectively With light emitting diodes LEDs becoming the lighting source of choice for transport planners and vehicle designers this book integrates information on road lighting vehicle lighting signs and signals in one handy volume International in scope and updated for this new edition this book features lighting examples from the USA the UK France Germany The Netherlands Denmark Sweden Norway Finland Japan Australia and New Zealand Lighting in common vehicle types including cars vans trucks and motorcycles is covered as well as the visibility of pedestrians and cyclists to drivers Coverage extends to road lighting traffic markings vehicle designs and internal lighting and weather conditions Now fully updated a final chapter looks at the future of lighting in relation to driving The book will help the reader to understand how lighting systems on roads and vehicles work by explaining the thinking and scientific reasoning behind various forms of lighting and analyzing their contribution to the driver's understanding of real and potential road hazards This book will be an

Aesthetics in Present Future The Arts and the Technological Horizon is a collection of essays by scholars and a few artists who focus on the issue of how arts either change when conveyed by new media such as the web 3D printers and videos or are simply diffused by them The contributors analyses describe how both virtual production and virtual communication change our attitudes toward what we call the arts The scope of the topics ranges from photography to cinema and painting from theater to avant garde art and Net art and from construction of robots to simulation of brain functions The result is an astonishing range of new possibilities and risks for the arts and new perspectives regarding our knowledge of the world

Psychology of Perception Simon Grondin,2025-04-30 This book defines the terminology used in the fields of sensation and perception and describes the biological and physical bases required for understanding sensory experiences It offers more specifically an introduction to the study of psychophysics auditory perception visual perception somesthesia time perception and attention and discusses the basic concepts and mechanisms used to interpret different perceptual phenomena Featured topics in this book Laws of psychophysics including the discrimination law of Weber and Stevens power law Psychophysical methods and signal detection theory Hearing music and speech Color form and depth perception Time perception Somatosensory systems The role of attention in perception Sensory disorders *Handbook of Nutrition, Diet, and the Eye* Victor R Preedy,2014-04-01 The Handbook of Nutrition Diet and the Eye is the first book to thoroughly address common features and etiological factors in how dietary and nutritional factors affect the eye The ocular system is perhaps one of the least studied organs in diet and nutrition yet the consequences of vision loss can be devastating One of the biggest contributors to complete vision loss in the western hemisphere is diabetes precipitated by metabolic syndrome In some developing countries micronutrient deficiencies are major contributory factors to impaired vision However there are a range of ocular defects that have either their origin in nutritional deficiencies or excess or have been shown to respond favorably to nutritional components The eye from the cornea to the retina may be affected by nutritional components Effects may be physiological or molecular This book represents essential reading for nutritionists dietitians optometrists ophthalmologists opticians endocrinologists and other clinicians and researchers interested in eye health and vision in general Saves clinicians and researchers time in quickly accessing the very latest details on a broad range of nutrition ocular health and disease issues Provides a common language for nutritionists nutrition researchers optometrists and ophthalmologists to discuss how dietary and nutritional factors and related diseases and syndromes affect the eye Preclinical clinical and population studies will help nutritionists dieticians and clinicians map out key areas for research and further clinical recommendations

Robotic Tactile Sensing Ravinder S. Dahiya,Maurizio Valle,2012-07-29 Future robots are expected to work closely and interact safely with real world objects and humans alike Sense of touch is important in this context as it helps estimate

properties such as shape texture hardness material type and many more provides action related information such as slip detection and helps carrying out actions such as rolling an object between fingers without dropping it This book presents an in depth description of the solutions available for gathering tactile data obtaining aforementioned tactile information from the data and effectively using the same in various robotic tasks The efforts during last four decades or so have yielded a wide spectrum of tactile sensing technologies and engineered solutions for both intrinsic and extrinsic touch sensors Nowadays new materials and structures are being explored for obtaining robotic skin with physical features like bendable conformable and stretchable Such features are important for covering various body parts of robots or 3D surfaces Nonetheless there exist many more hardware software and application related issues that must be considered to make tactile sensing an effective component of future robotic platforms This book presents an in depth analysis of various system related issues and presents the trade offs one may face while developing an effective tactile sensing system For this purpose human touch sensing has also been explored The design hints coming out of the investigations into human sense of touch can be useful in improving the effectiveness of tactile sensory modality in robotics and other machines Better integration of tactile sensors on a robot's body is prerequisite for the effective utilization of tactile data The concept of semiconductor devices based sensors is an interesting one as it allows compact and fast tactile sensing systems with capabilities such as human like spatio temporal resolution This book presents a comprehensive description of semiconductor devices based tactile sensing In particular novel Piezo Oxide Semiconductor Field Effect Transistor POSFET based approach for high resolution tactile sensing has been discussed in detail Finally the extension of semiconductors devices based sensors concept to large and flexible areas has been discussed for obtaining robotic or electronic skin With its multidisciplinary scope this book is suitable for graduate students and researchers coming from diverse areas such robotics bio robots humanoids rehabilitation etc applied materials humans touch sensing electronics microsystems and instrumentation To better explain the concepts the text is supported by large number of figures
